

Tabs

Tabs group together content and display one at a time, they should not be used for important content as it may not be visible on page load. Tabs should be presented horizontally and above content.

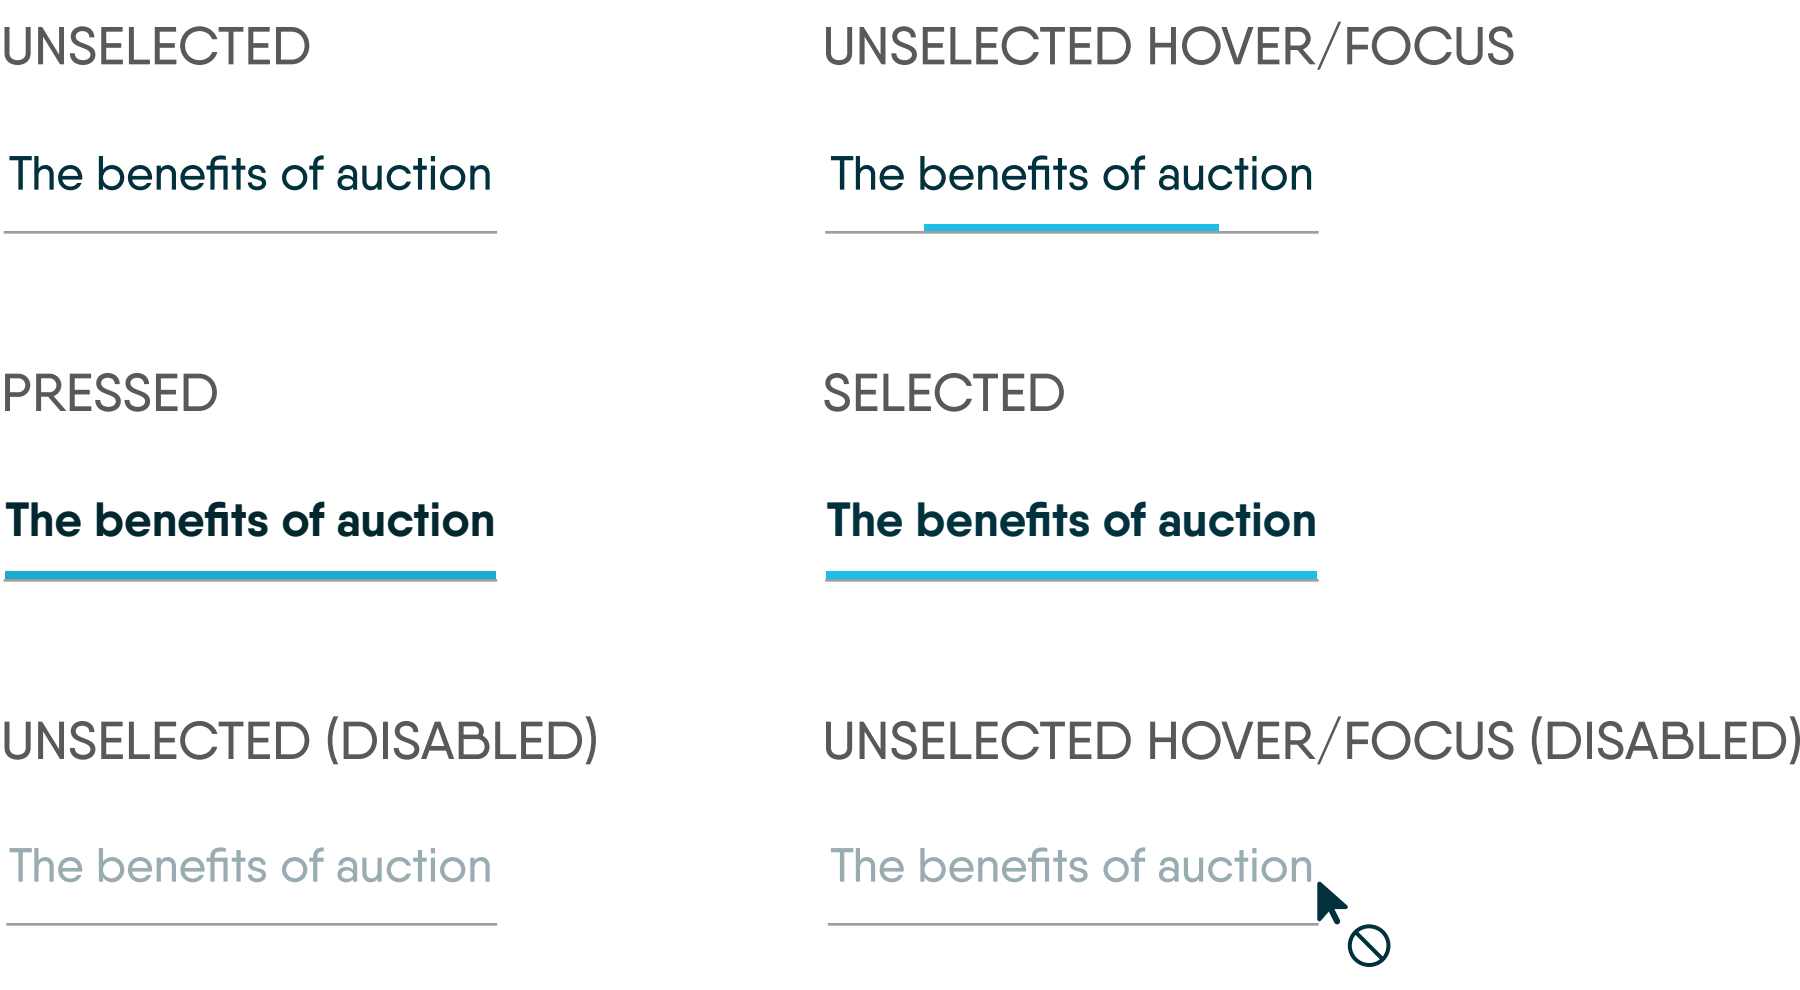

Tabs

Anatomy

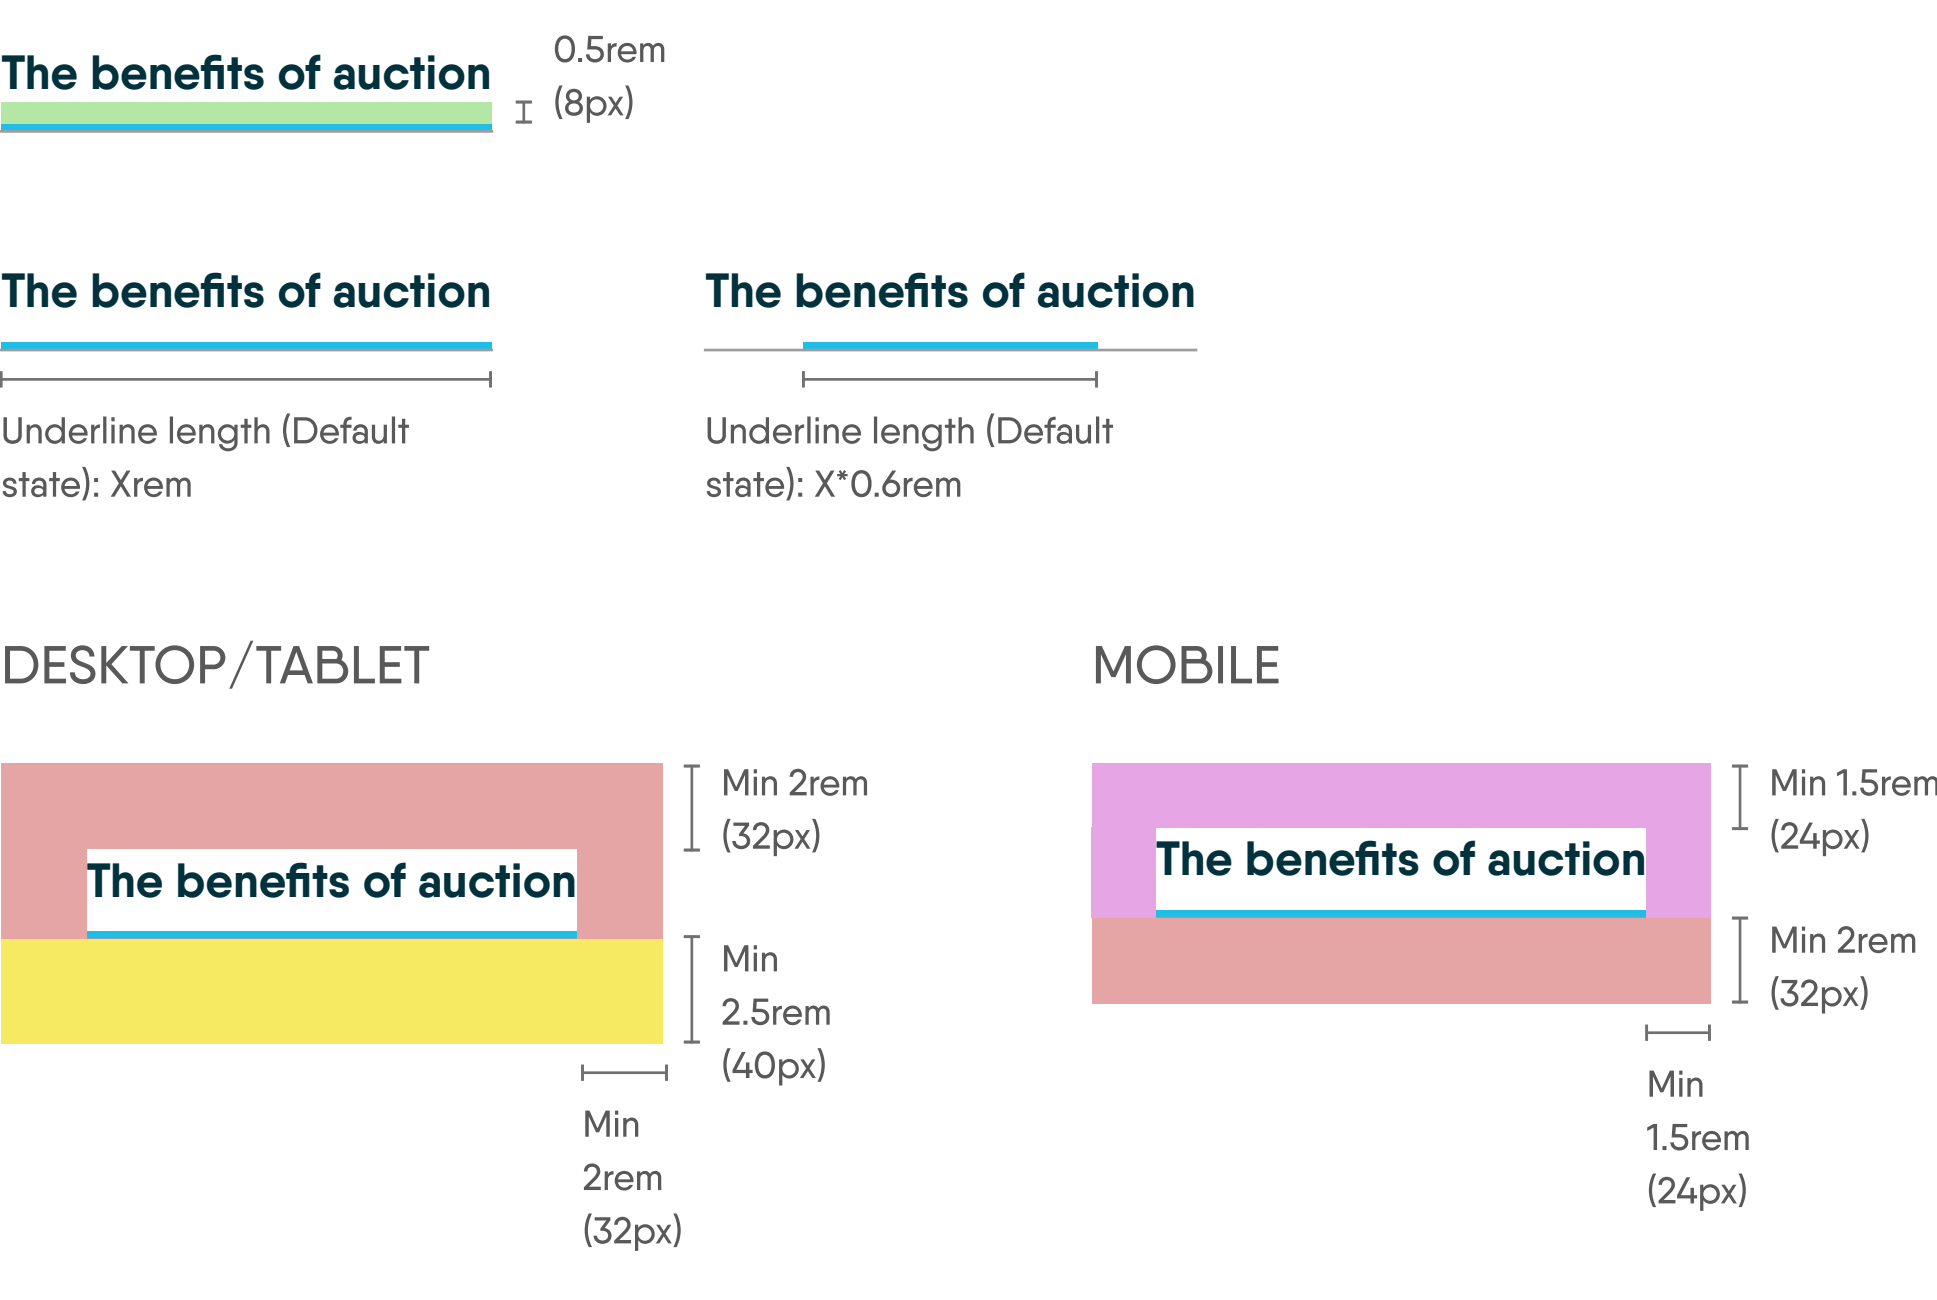

1. Selected tab item name: this should briefly summarise what type of content is shown below the tab.
2. Selected tab underline: this line shows beneath the selected tab item.
3. Unselected tab item name: this should briefly summarise what type of content is shown below the tab when selected.
4. Tabs underline: this line stretches the width of the page and serves as a separation between the tab items and tab content.
5. Tab content: the content that is shown when a tab is selected.

States

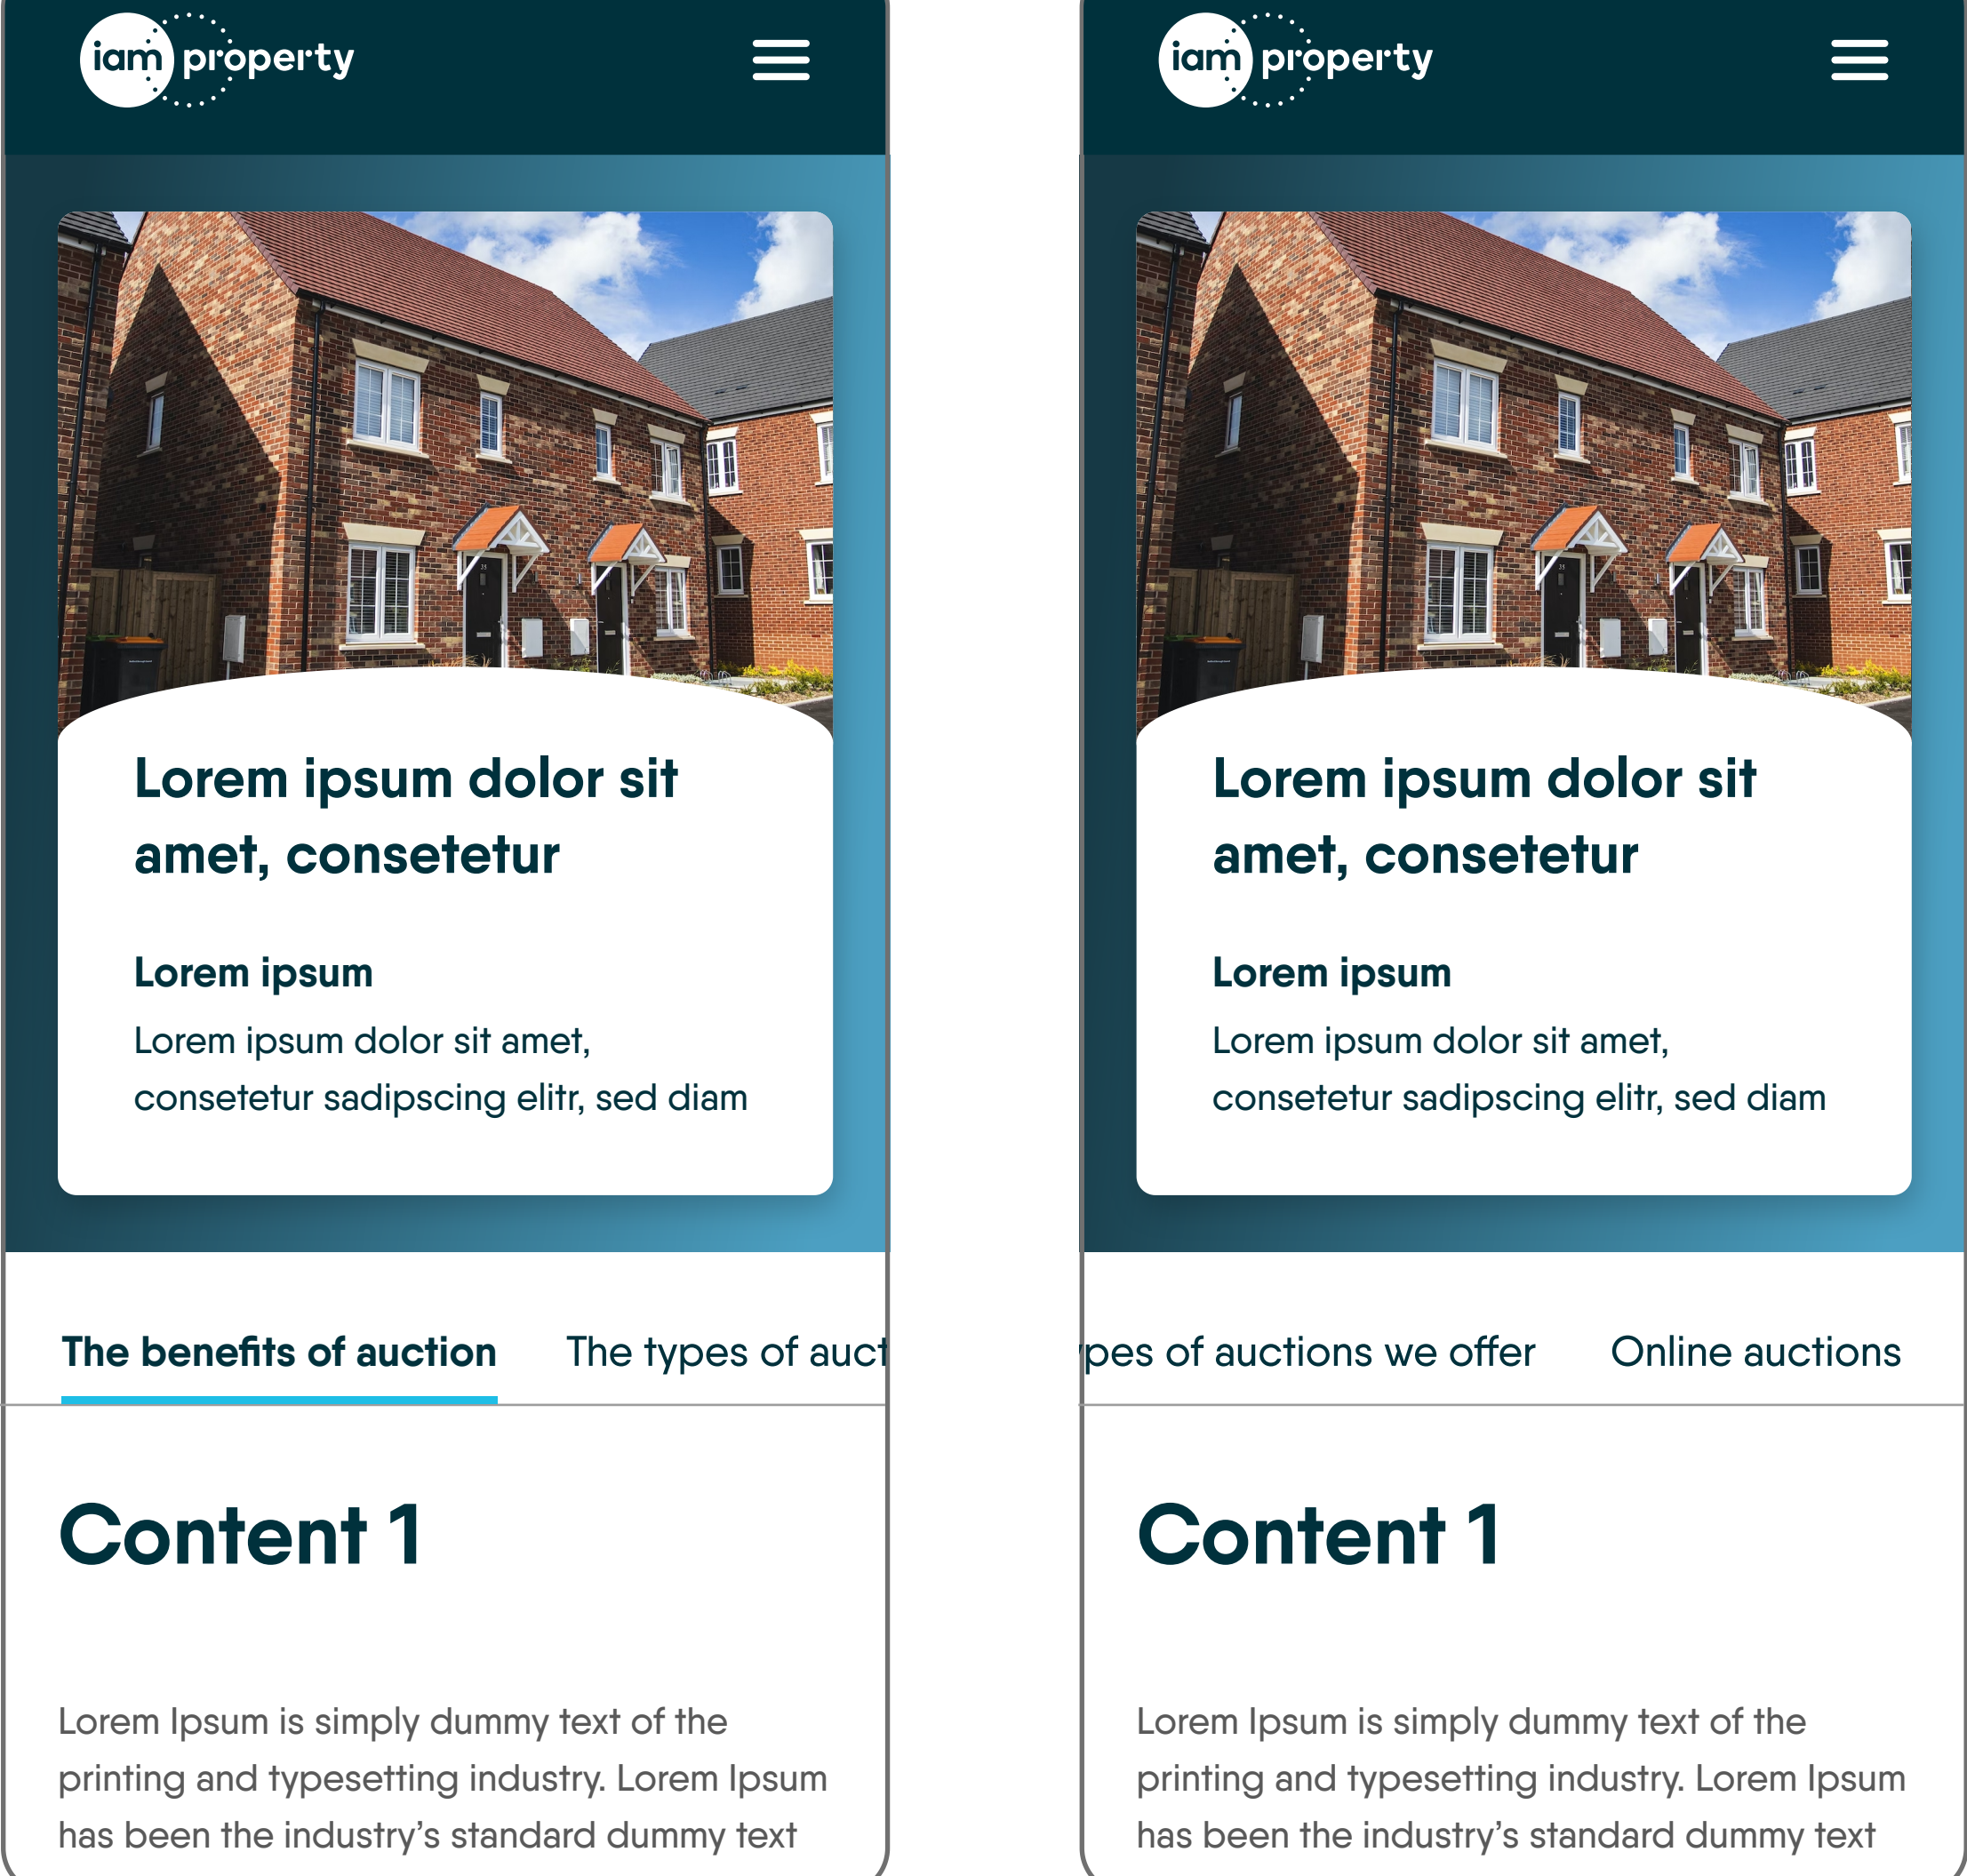

Dimensions

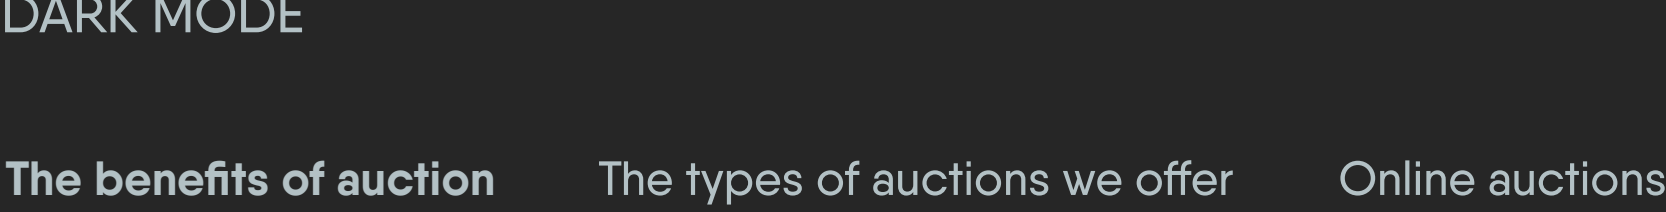

Mobile behaviour

If the total width of the tab items exceeds the screen width on mobile, the tab list should be scrollable horizontally.

Mode examples

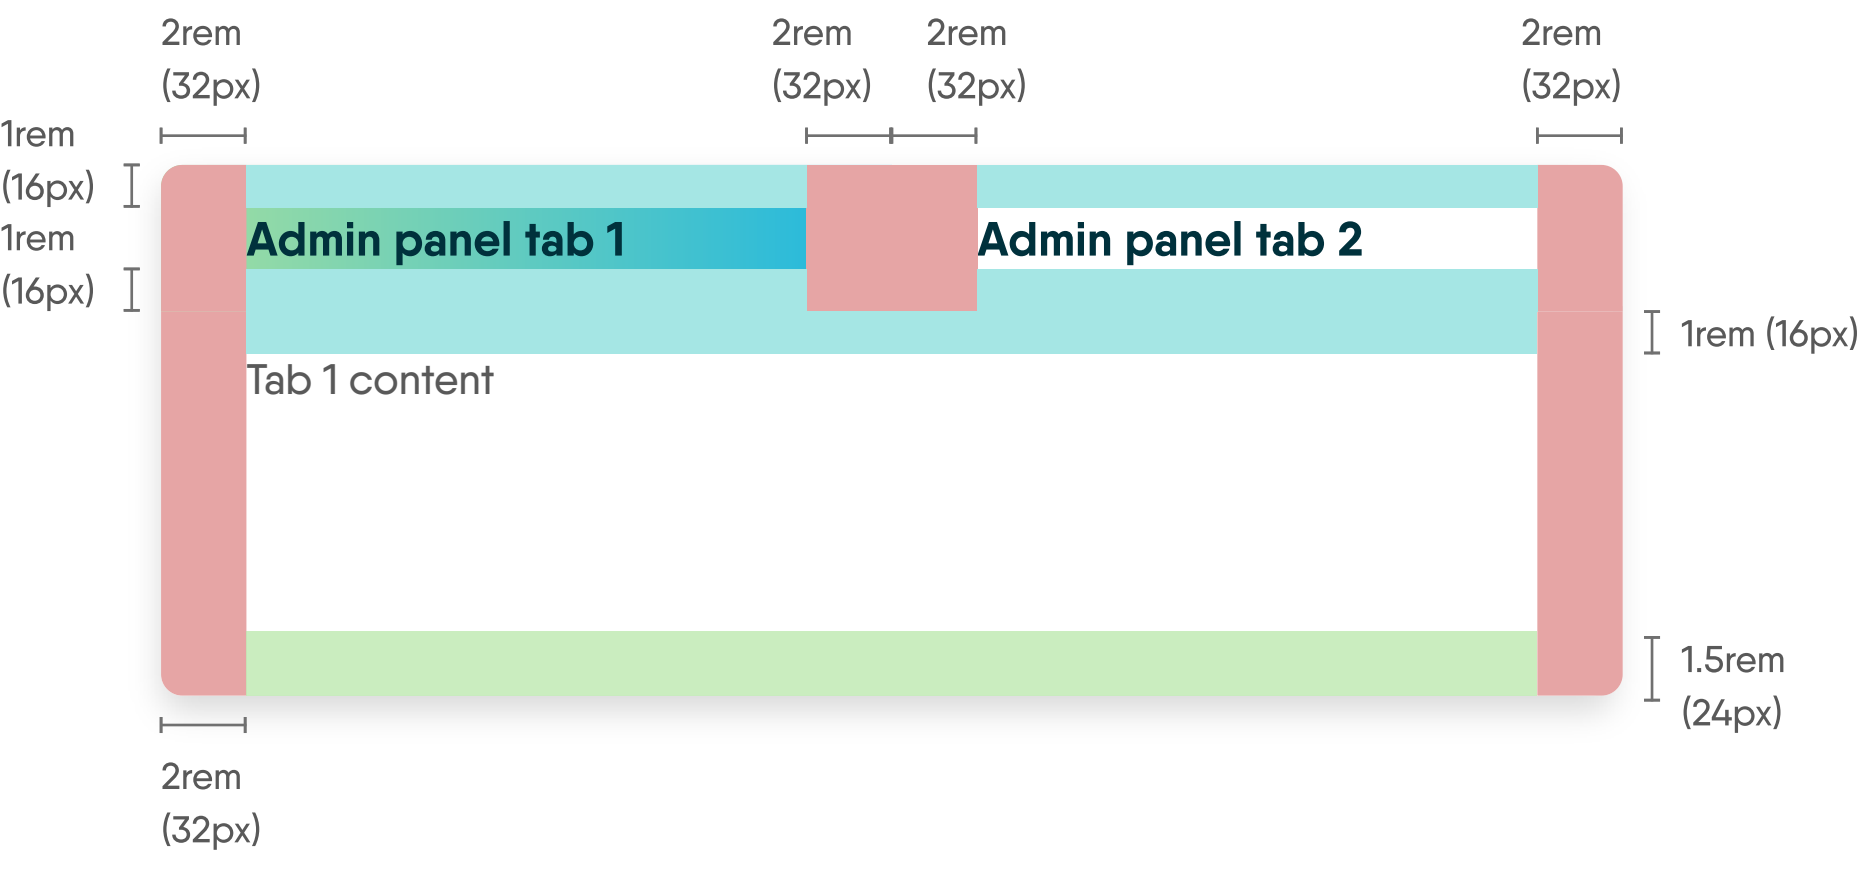

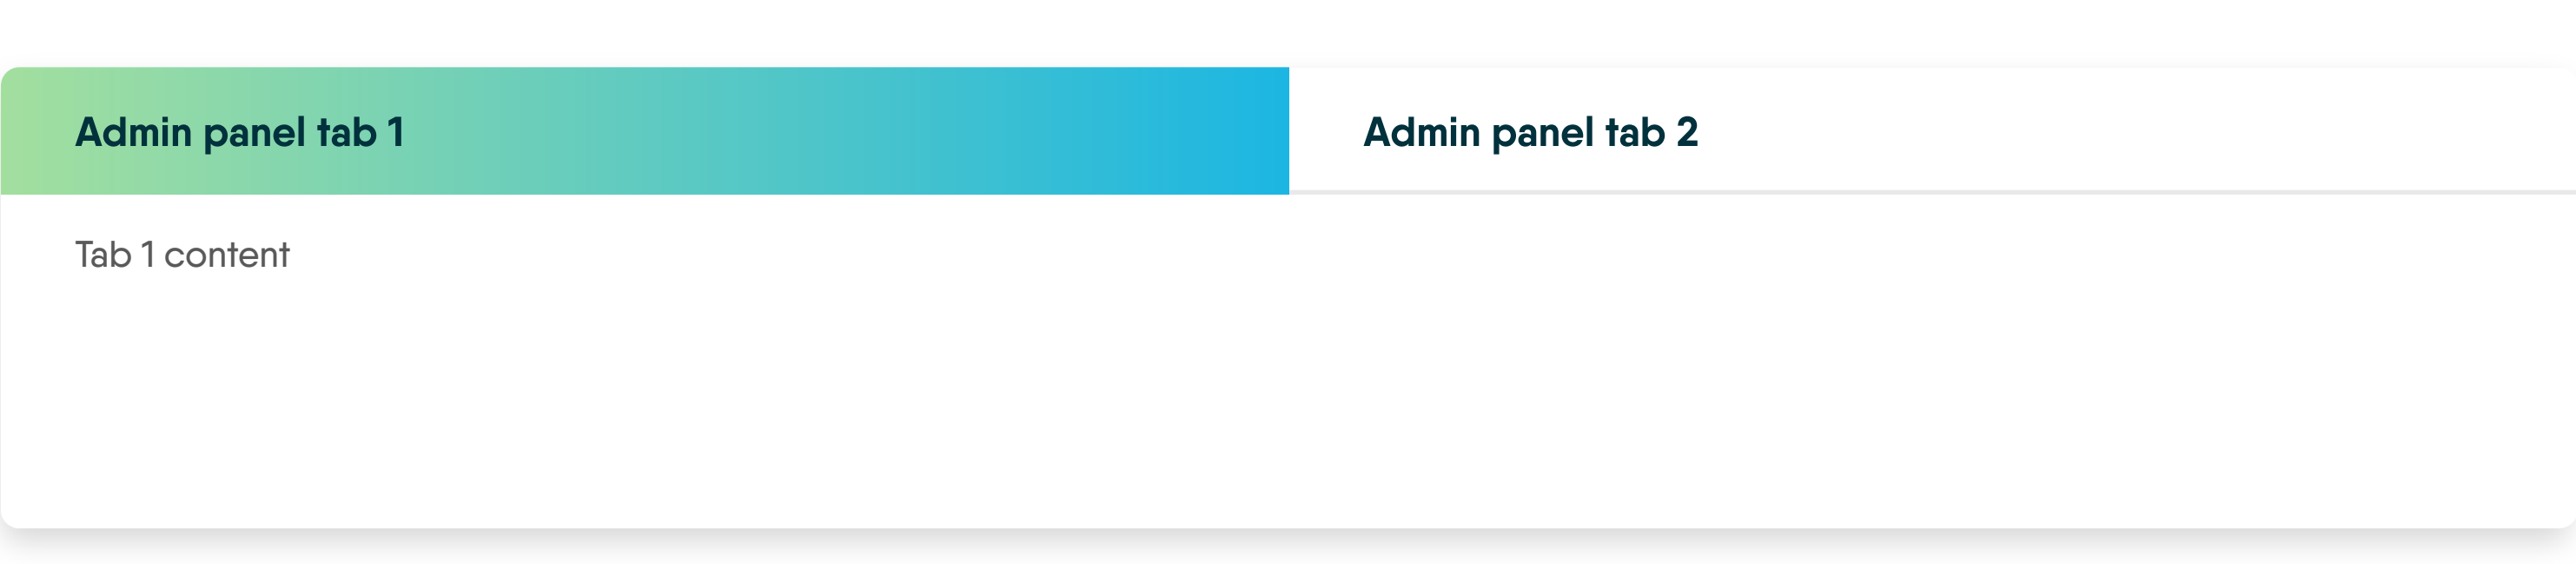

HIDE CONTRAST MODE

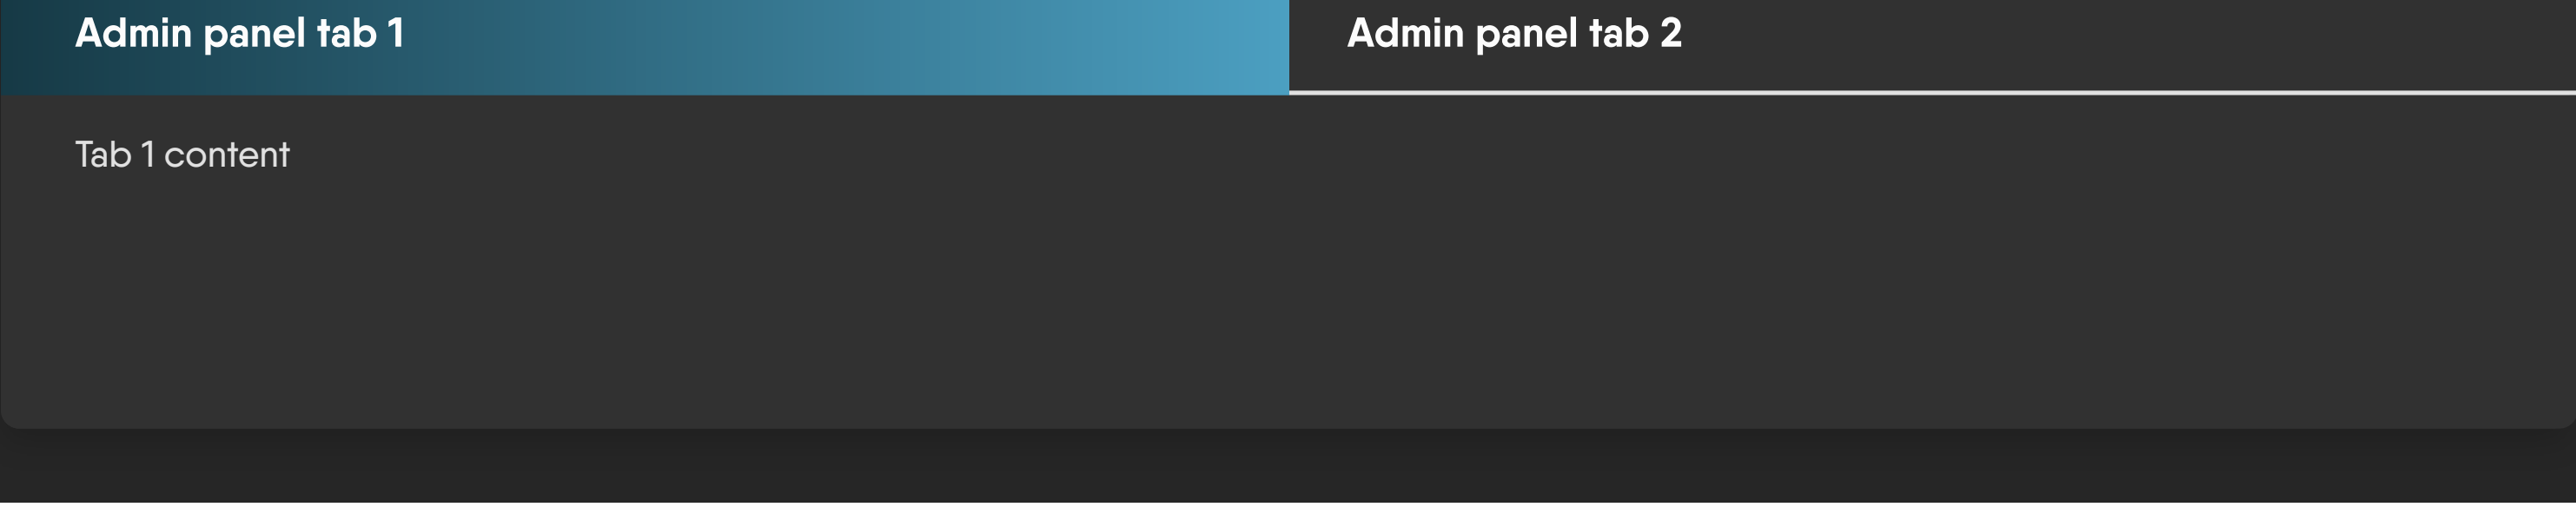

Admin panel tabs

Admin panels can have tabs as a header. Selecting each tab will change the content shown within the admin panel content. The light & dark gradient and block colours can all be used as the highlight colour for the selected tab. A maximum of 2 tabs should be used within an admin panel. Tab title's should be brief.
