

# Cards

## Navigational cards

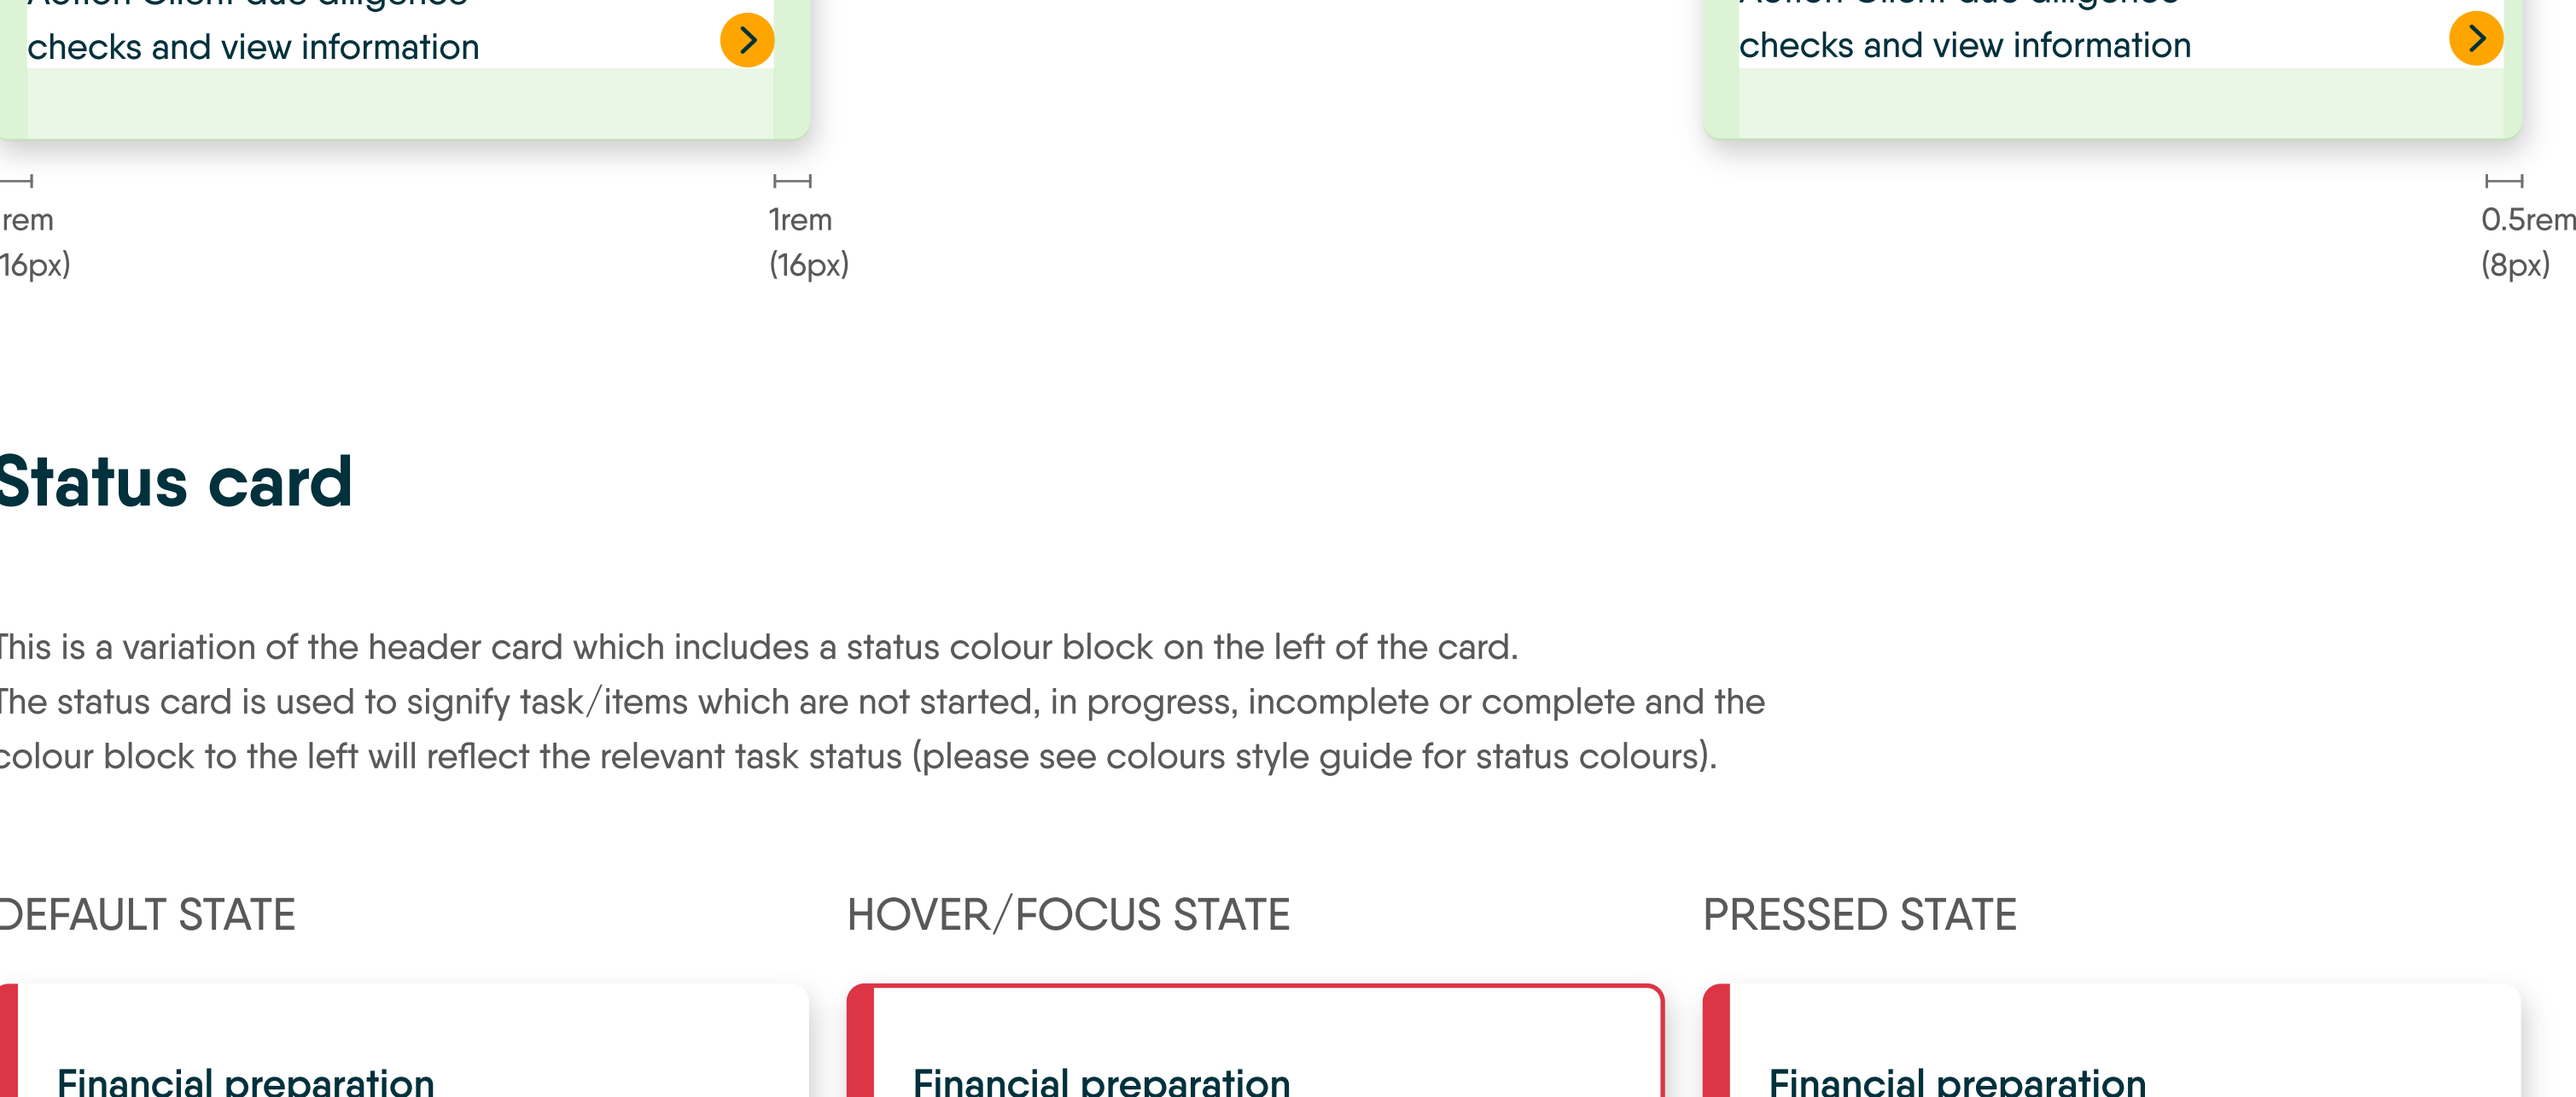

Navigational cards can be used to direct the user to another page or modal. All will apply a drop shadow with a default colour of HEX #000000, 6px Y-axis and 12px blur with an opacity of 15% as default unless specified otherwise, this should have the ability to be removed if needed.

### Header card

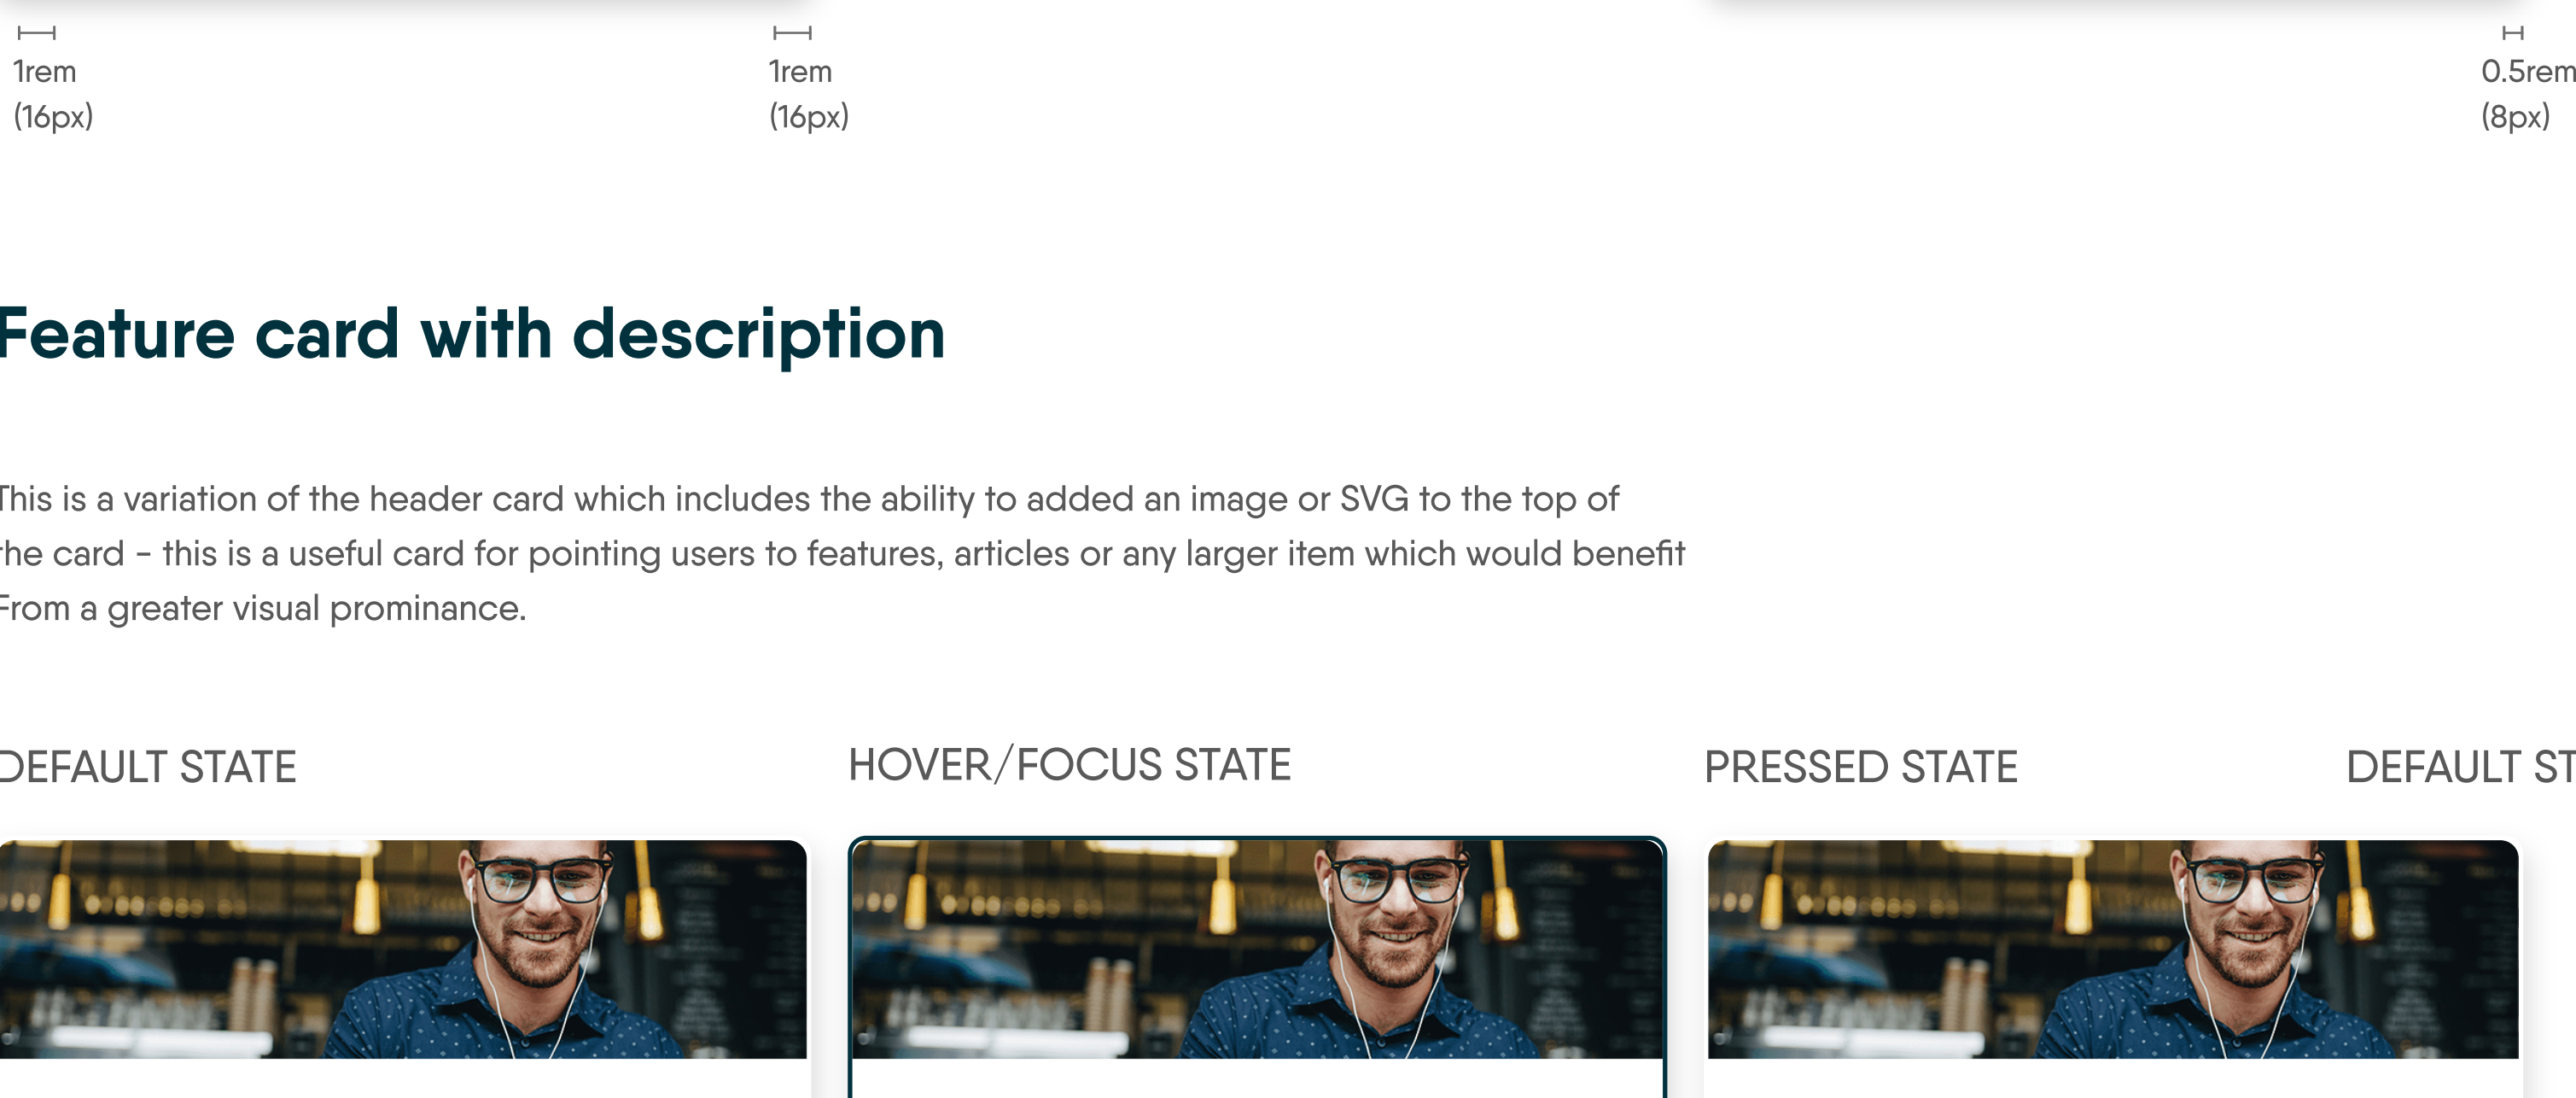

### Header card with description

This is a variation of the Header card which includes the addition body copy description.

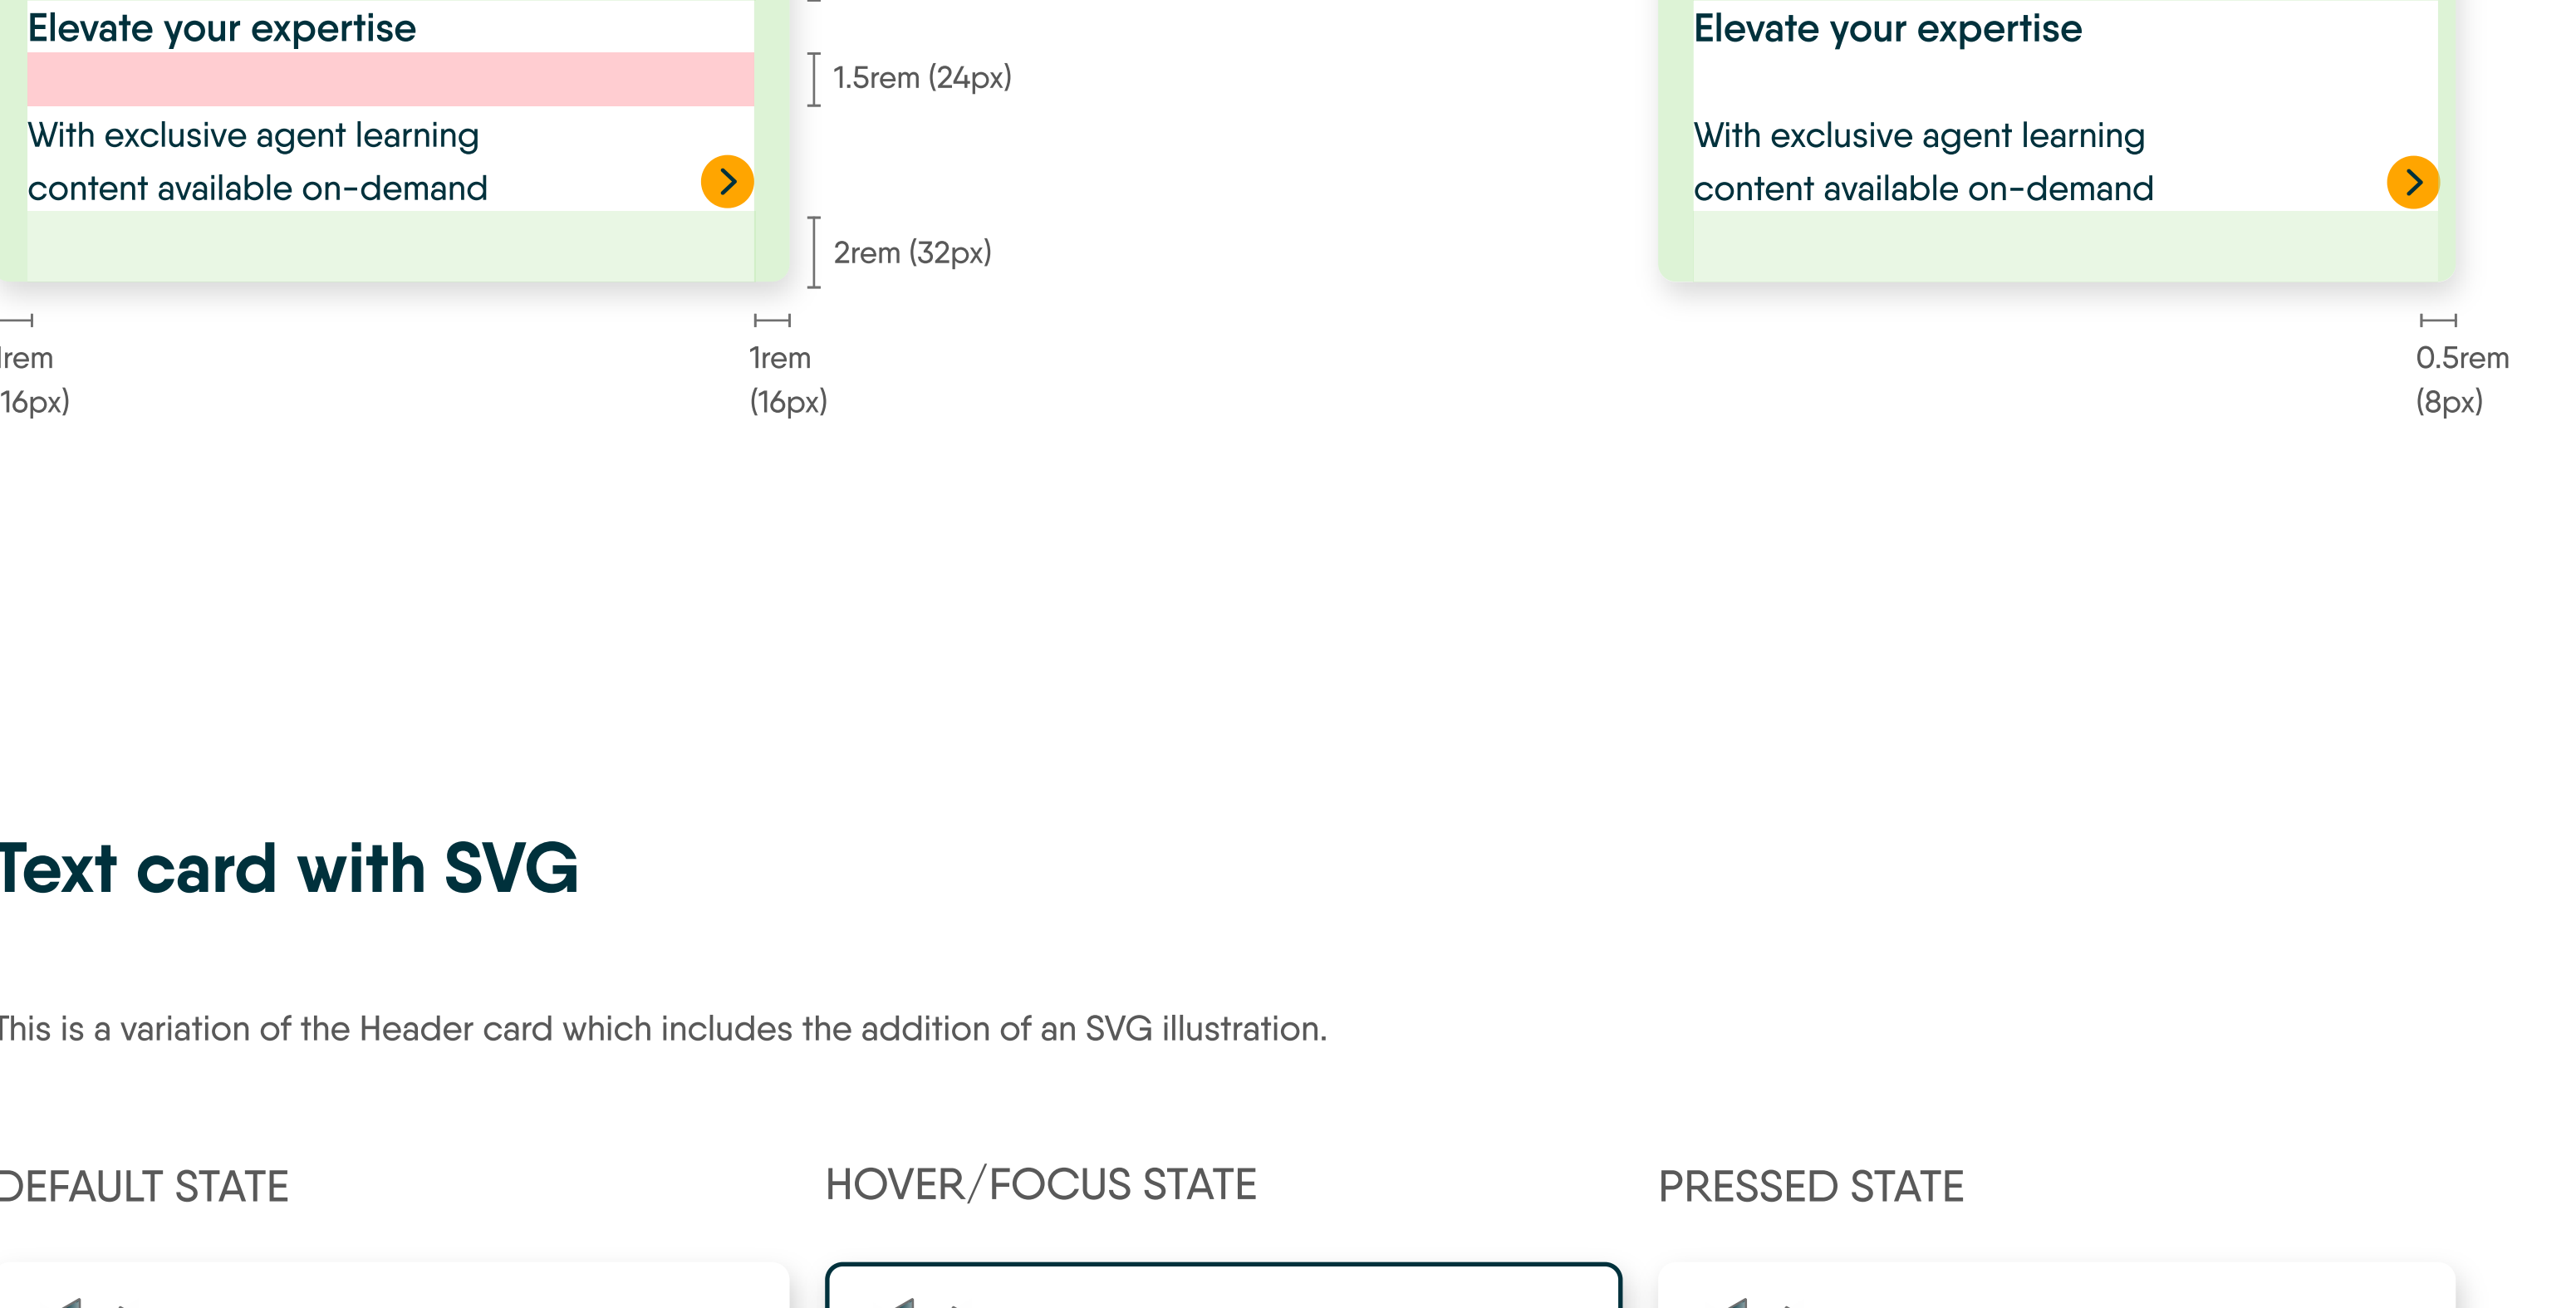

### Status card

This is a variation of the header card which includes a status colour block on the left of the card. The status card is used to signify task/items which are not started, in progress, incomplete or complete and the colour block to the left will reflect the relevant task status (please see colours style guide for status colours).

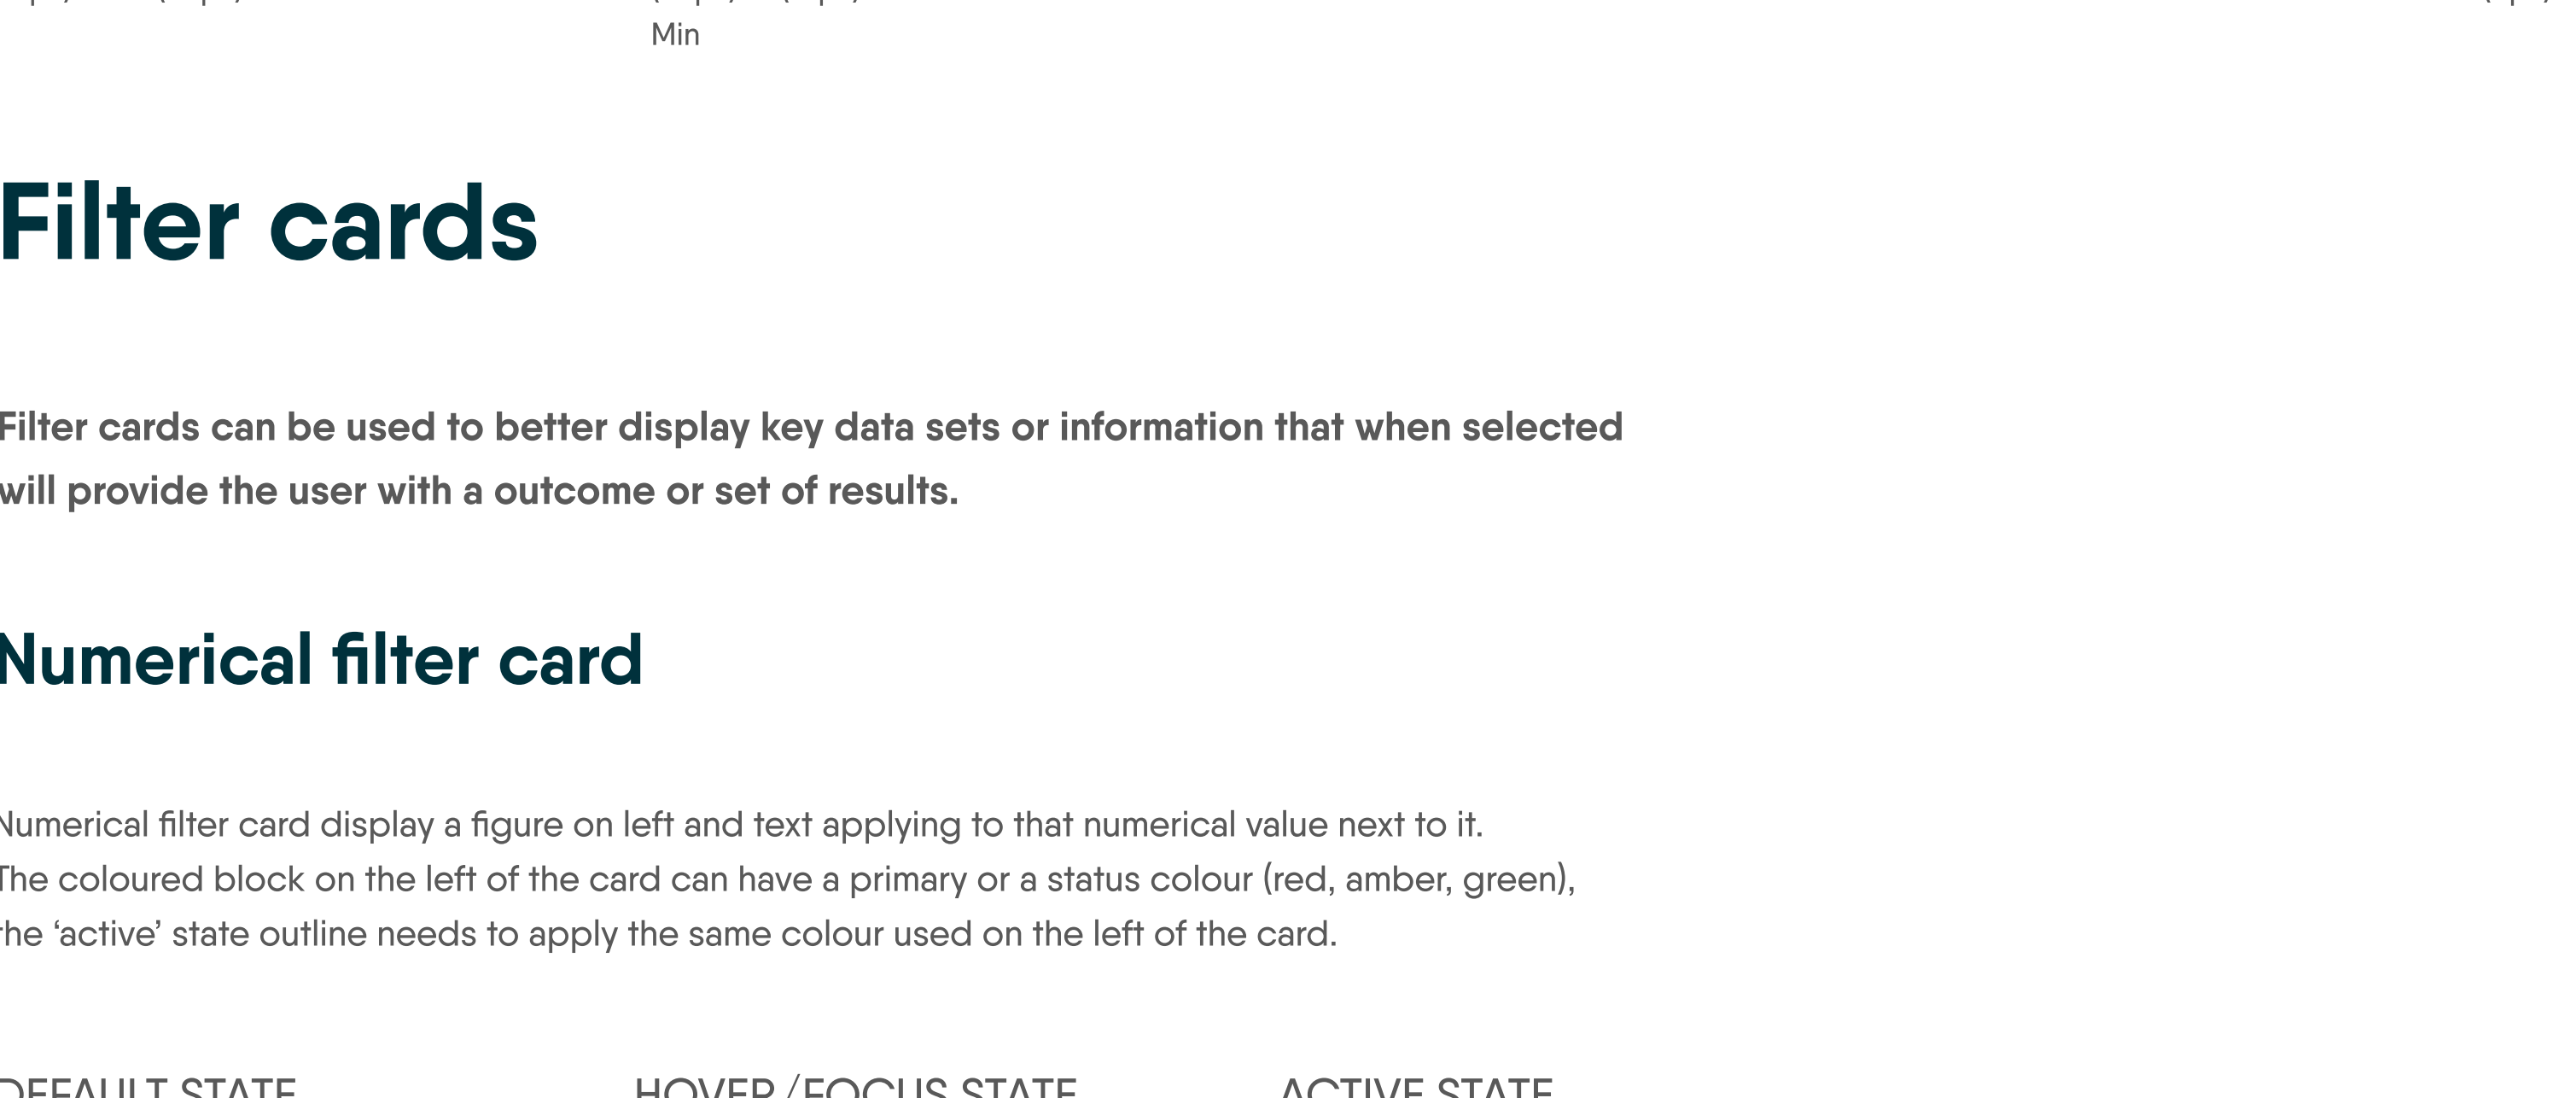

### Feature card with description

This is a variation of the header card which includes the ability to added an image or SVG to the top of the card - this is a useful card for pointing users to features, articles or any larger item which would benefit From a greater visual prominence.

### Text card with SVG

This is a variation of the Header card which includes the addition of an SVG illustration.

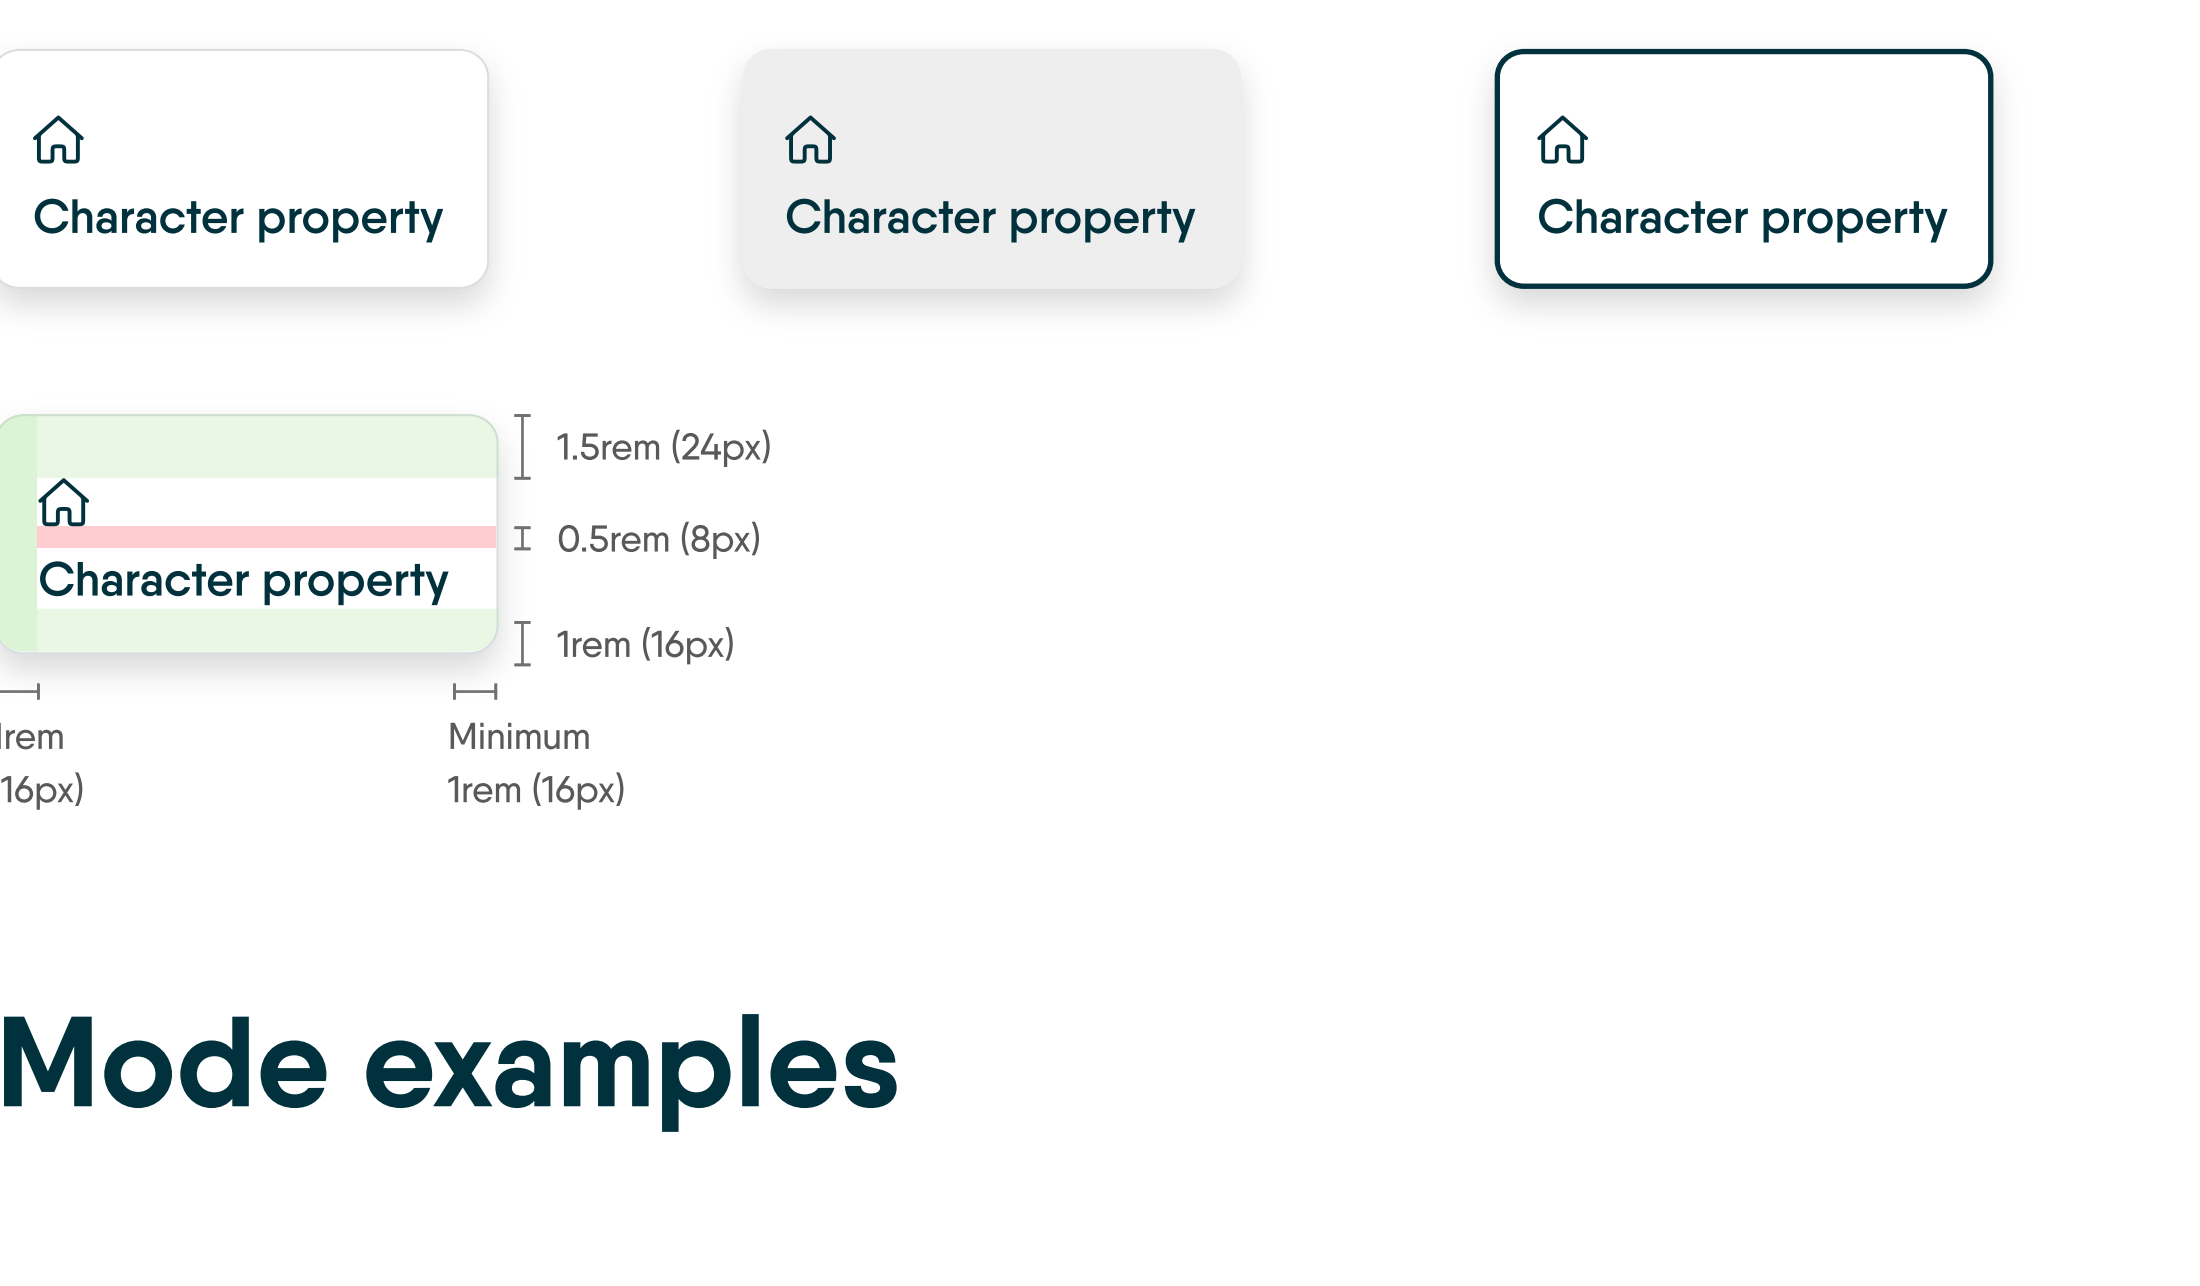

## Filter cards

Filter cards can be used to better display key data sets or information that when selected will provide the user with a outcome or set of results.

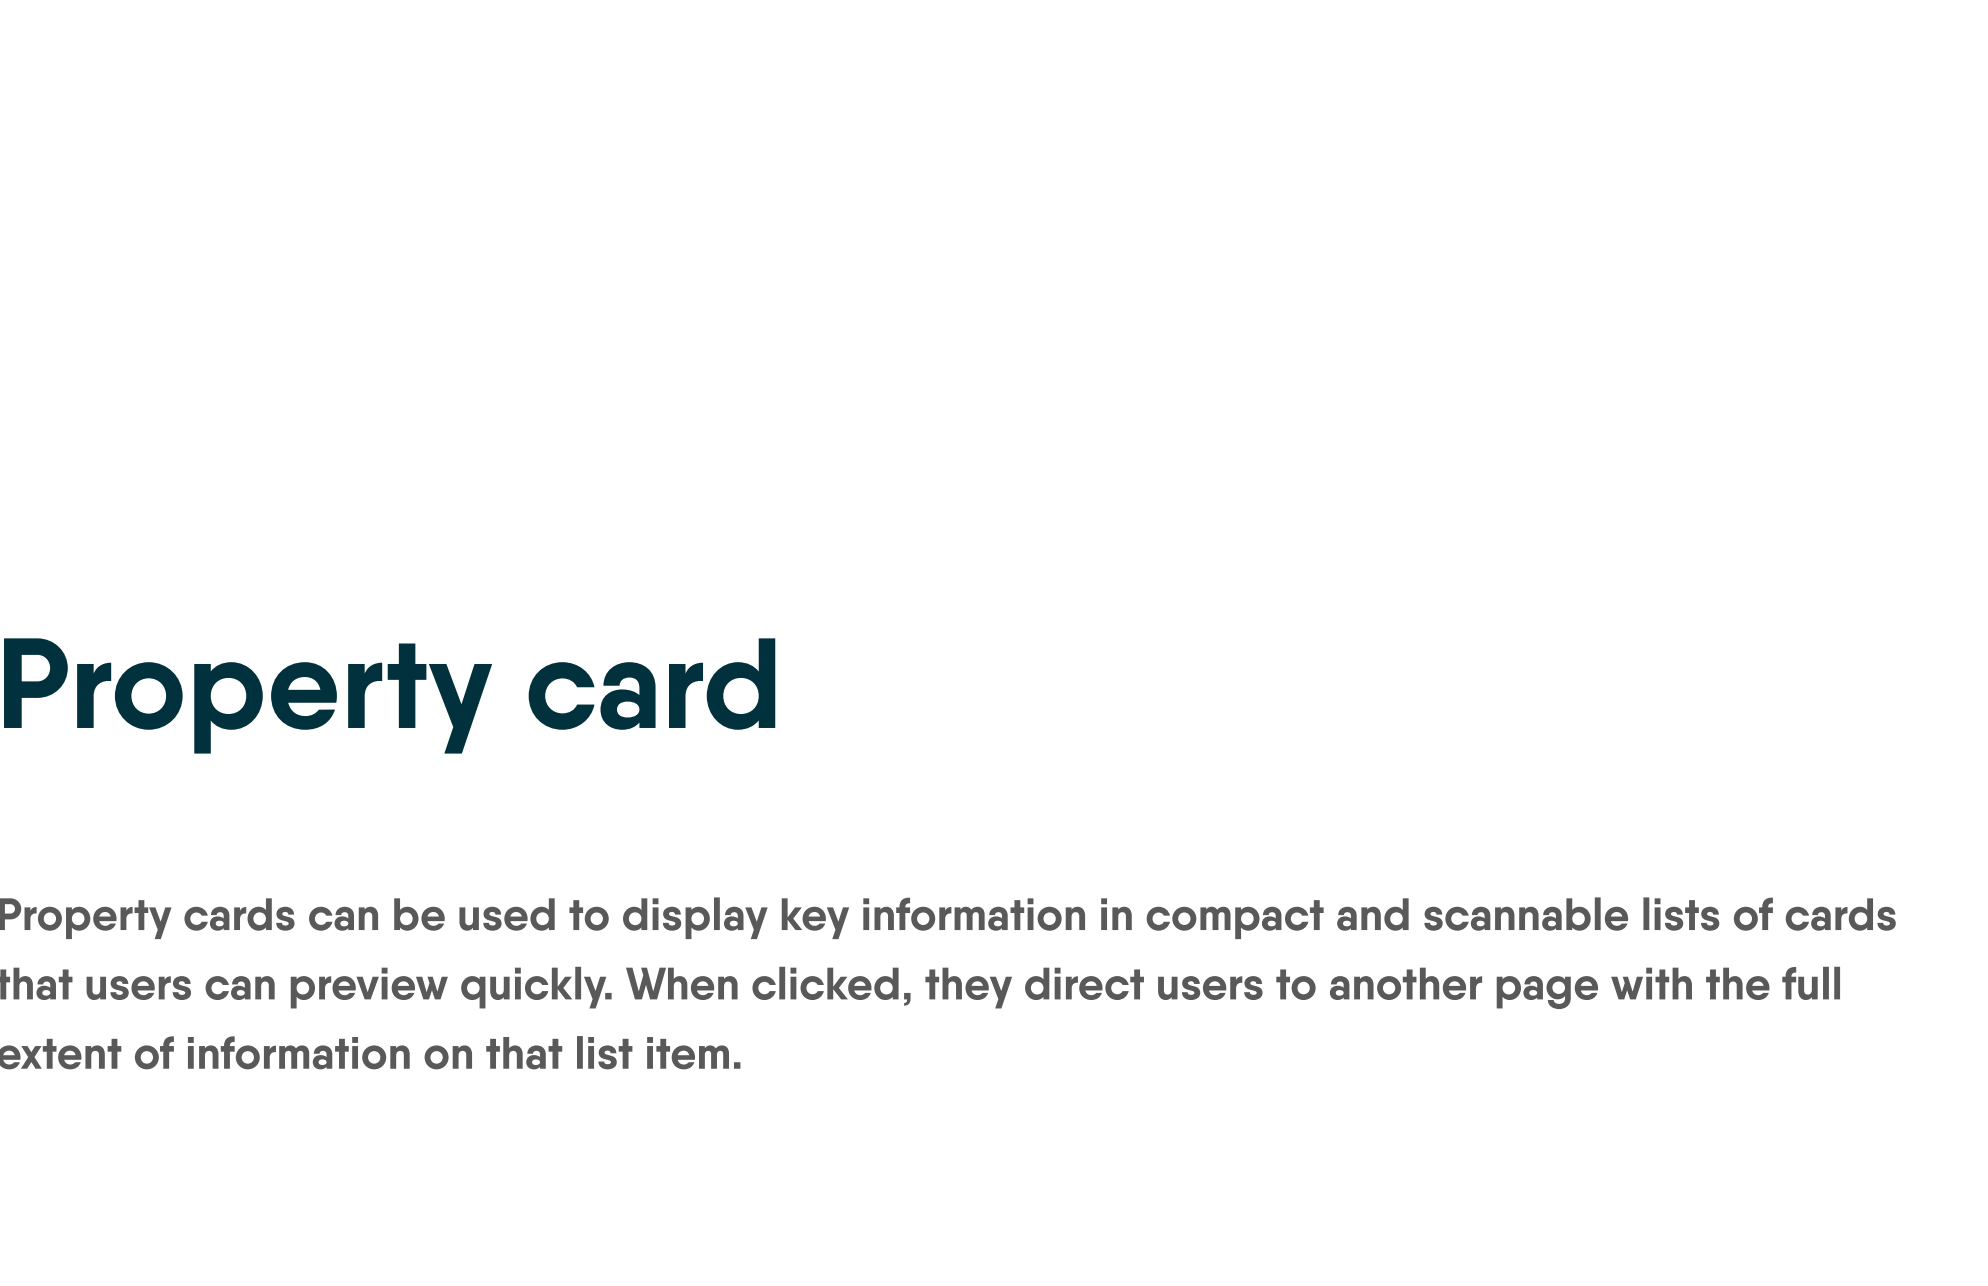

### Numerical filter card

Numerical filter card display a figure on left and text applying to that numerical value next to it. The coloured block on the left of the card can have a primary or a status colour (red, amber, green), the 'active' state outline needs to apply the same colour used on the left of the card.

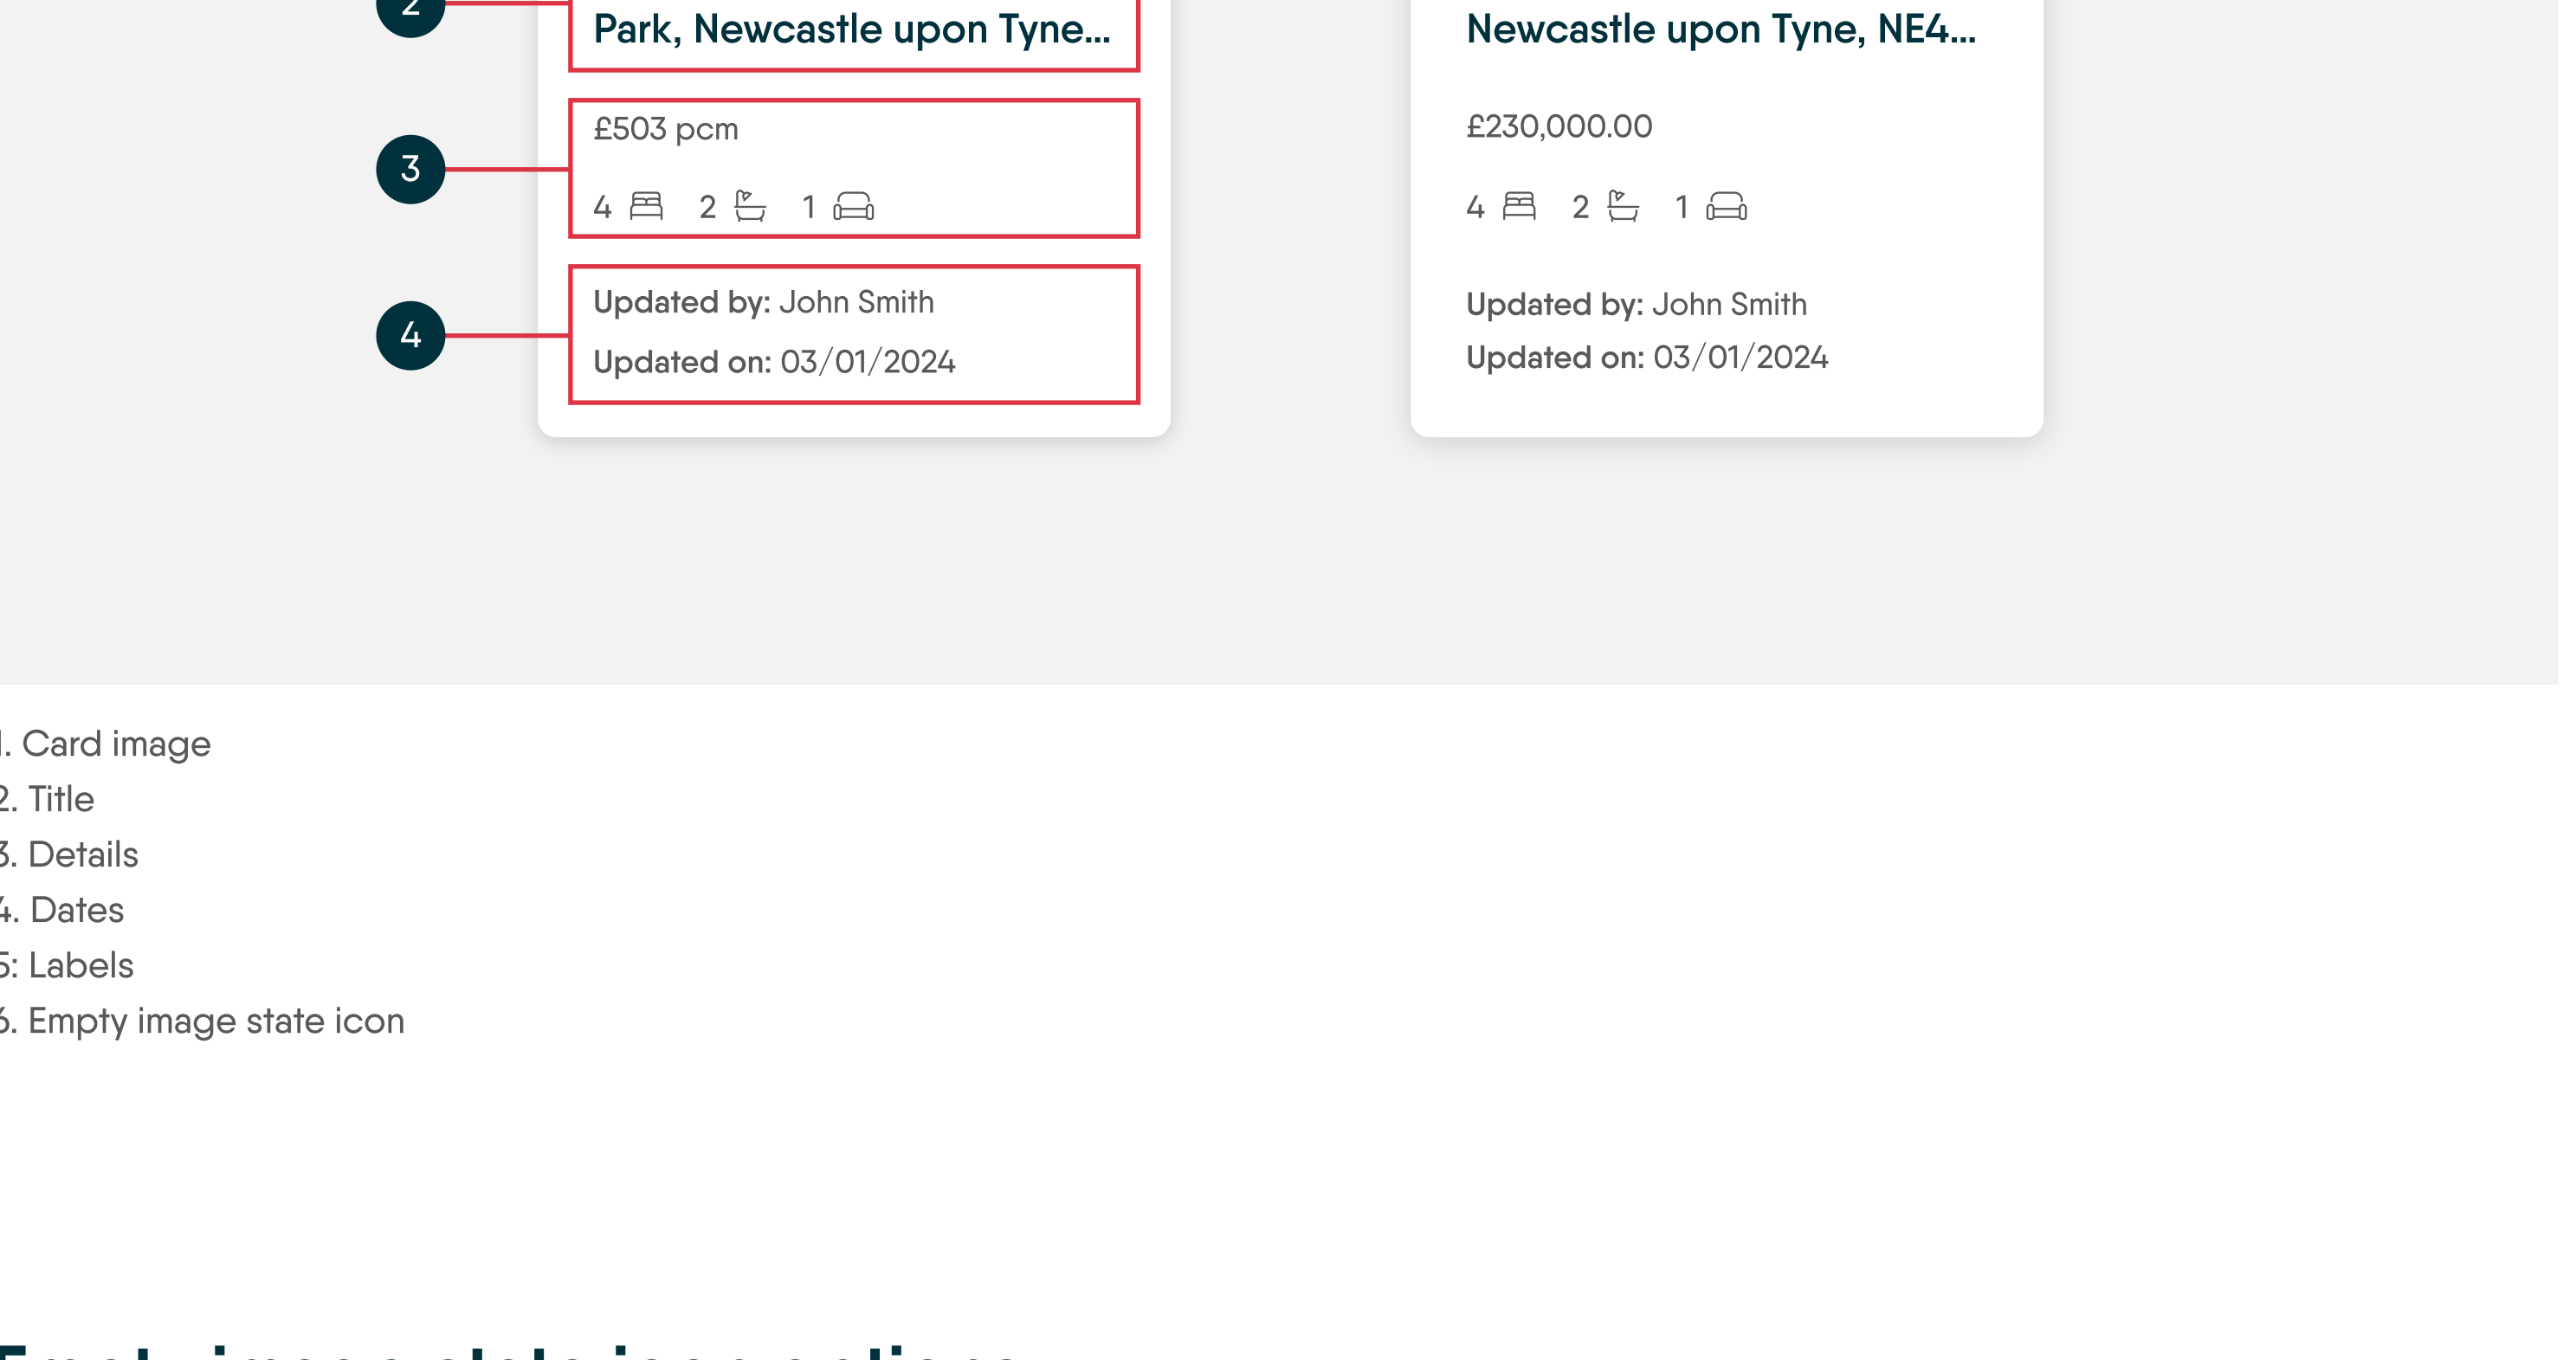

### Text and icon filter card

This filter card provides user with a visual aid (icon) as well as a text label to ensure the user gains a quicker understanding of the filter card subject. This card can also apply a drop shadow with a default colour of HEX #000000, 6px Y-axis and 12px blur with an opacity of 15%.

## Mode examples

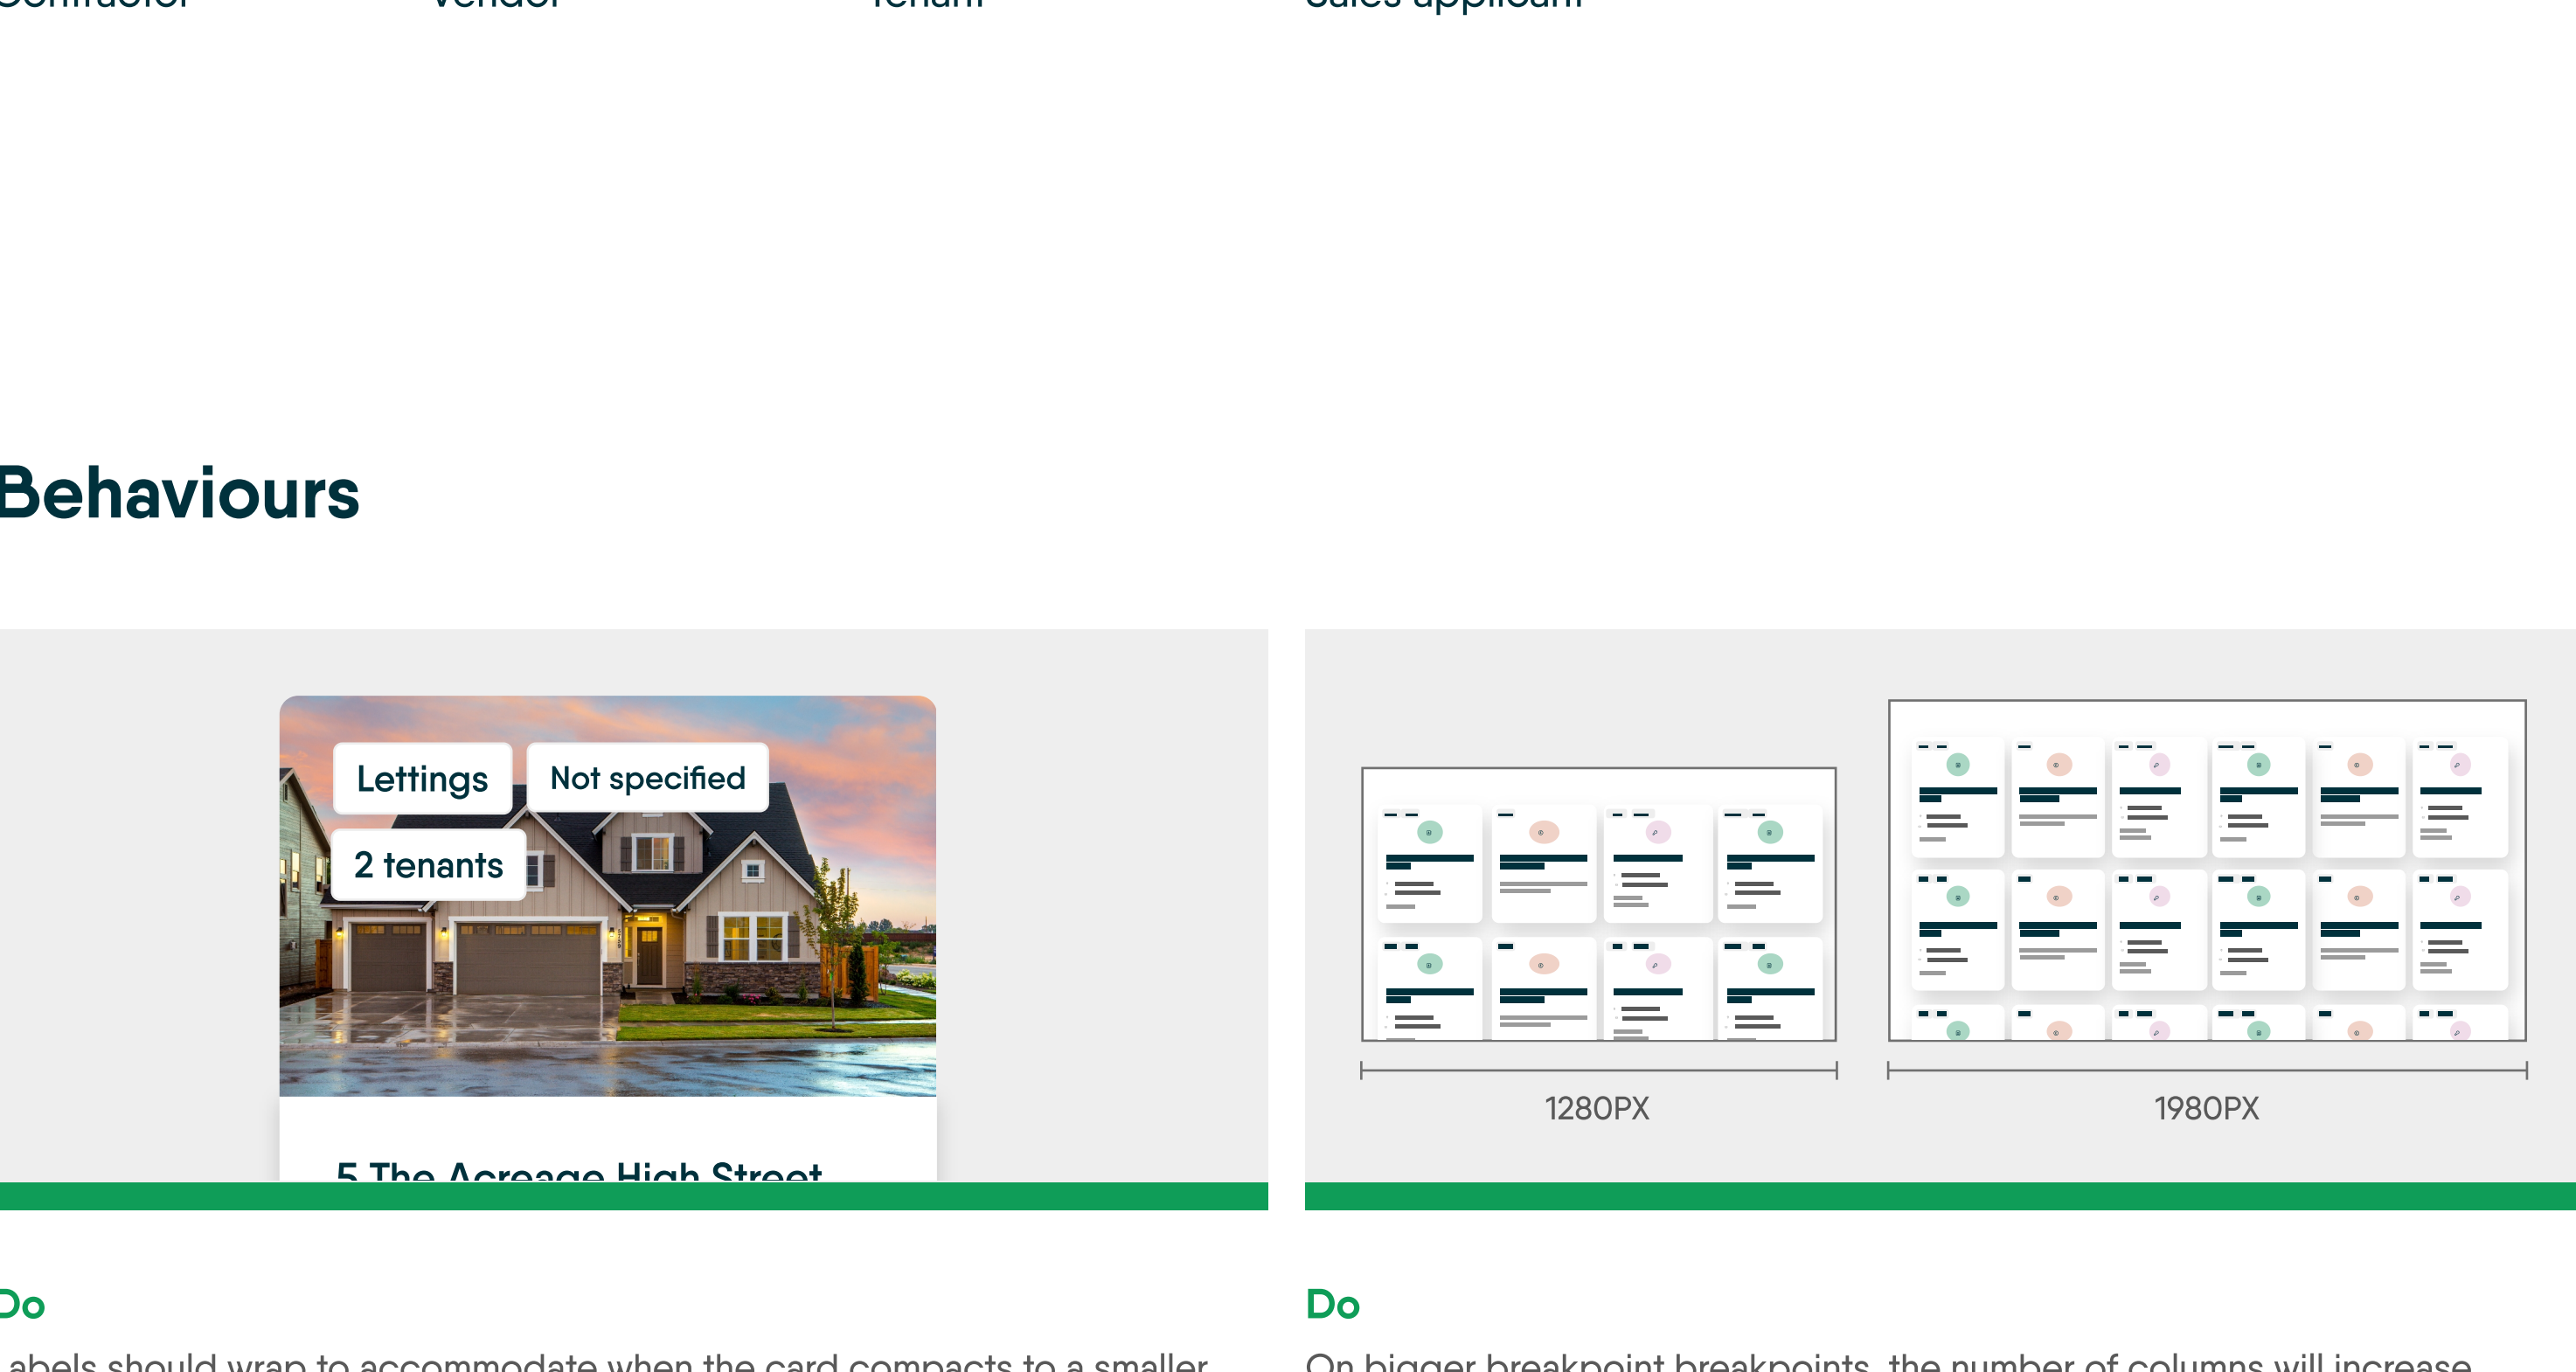

This is an example of how cards can be displayed across light mode, dark mode, and high contrast mode

## Property card

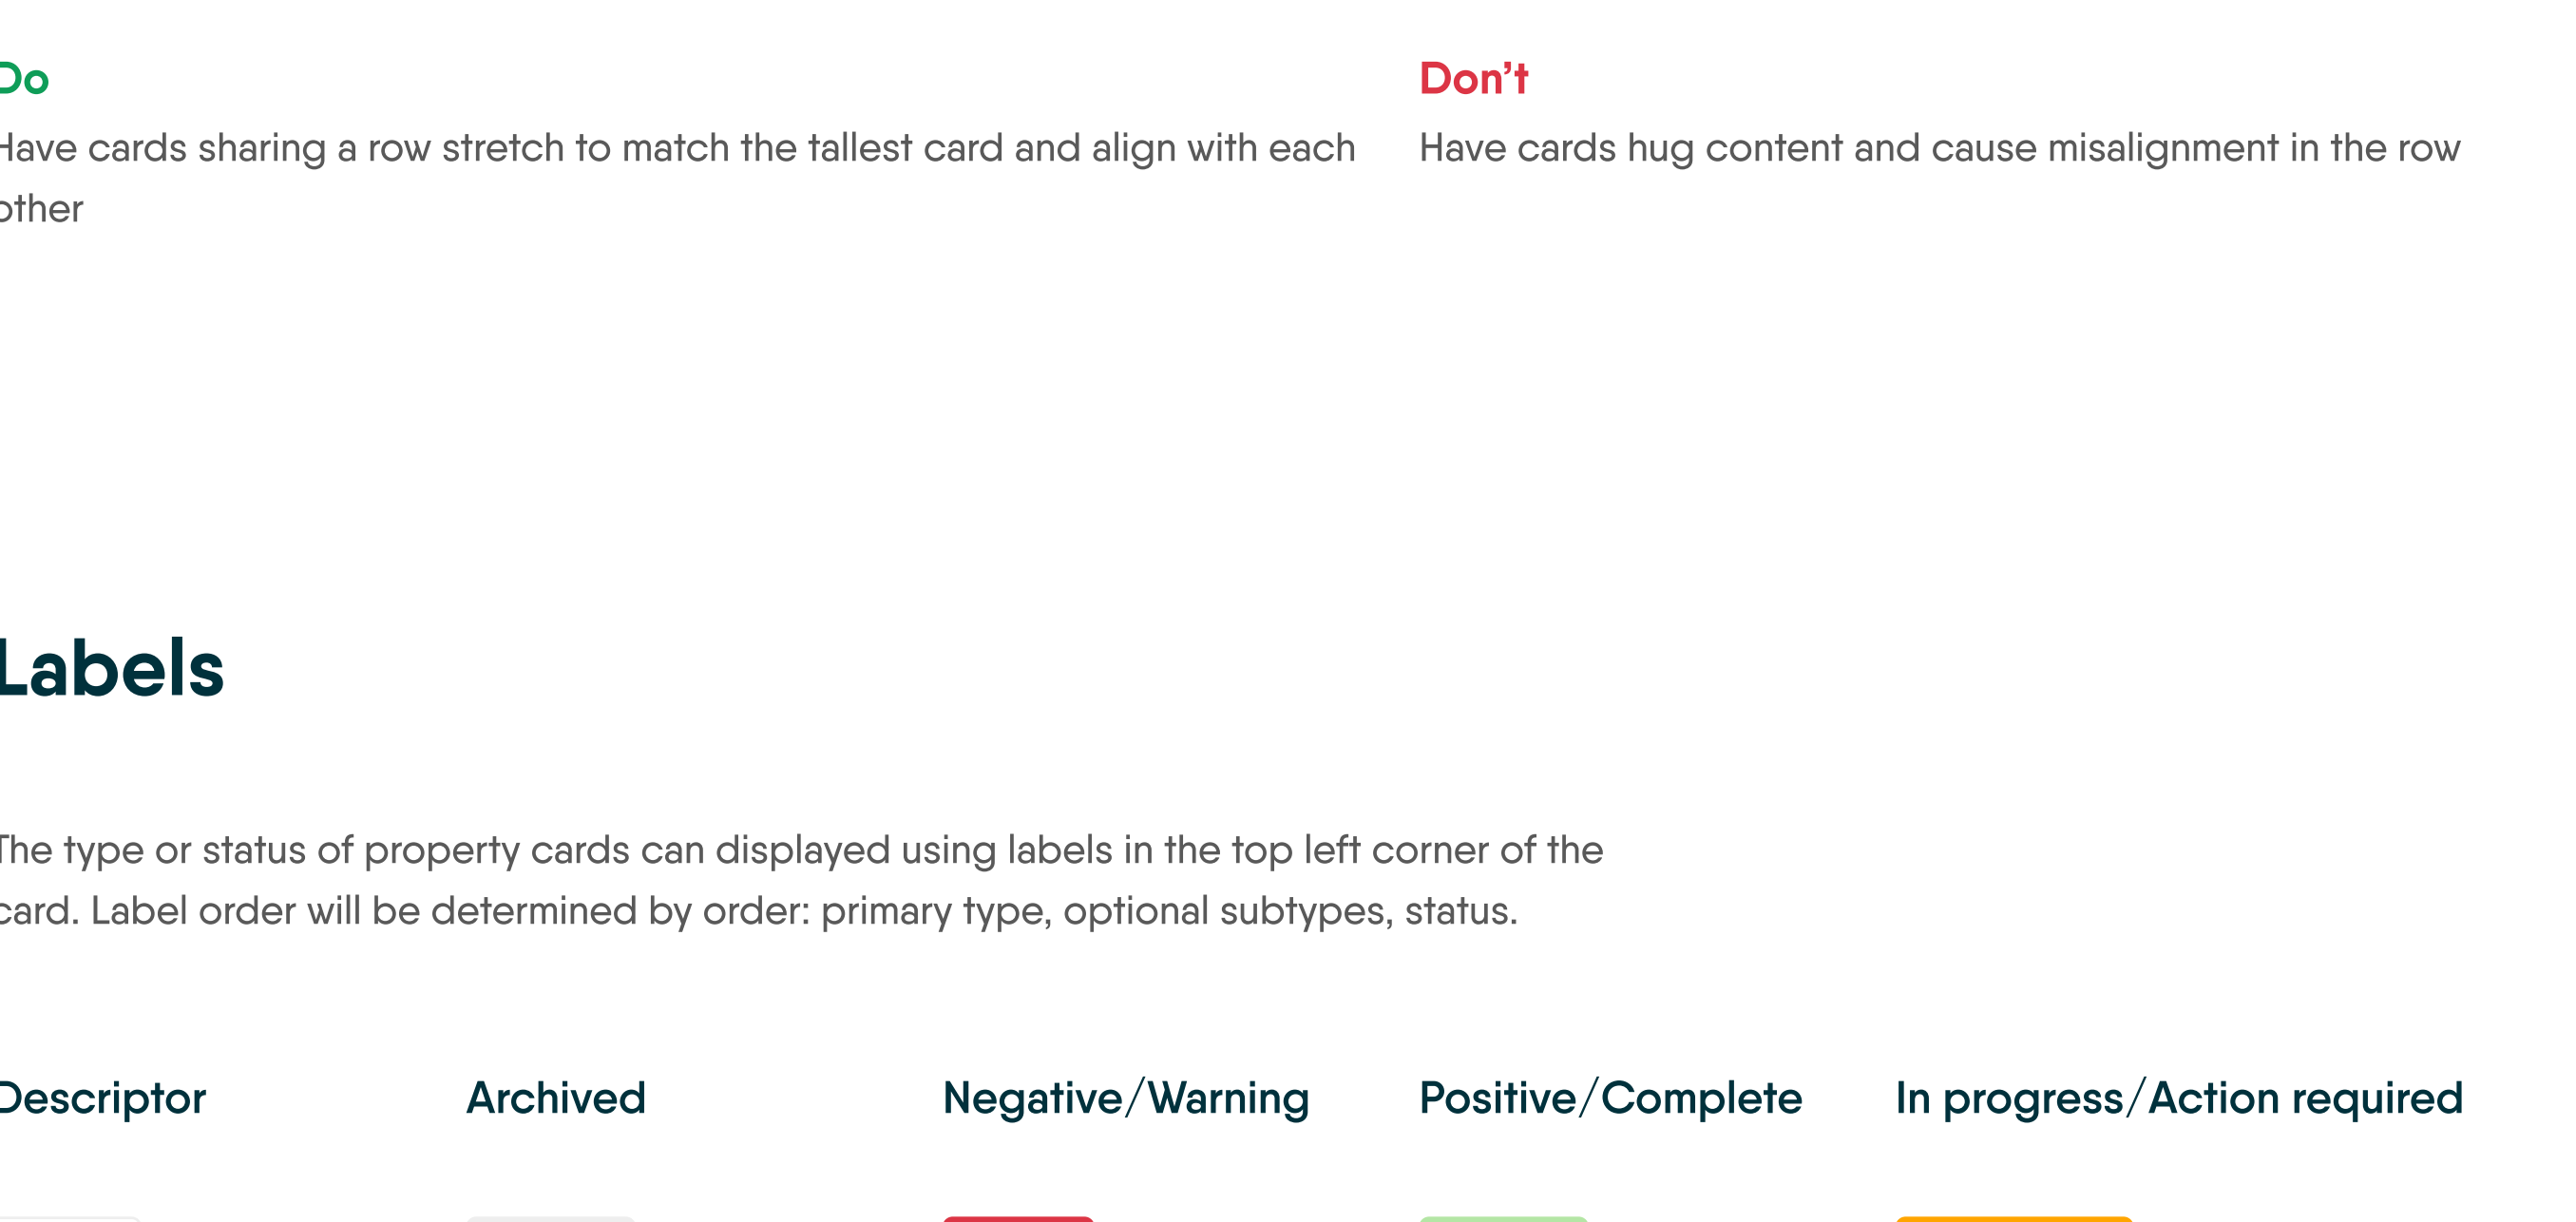

Property cards can be used to display key information in compact and scannable lists of cards that users can preview quickly. When clicked, they direct users to another page with the full extent of information on that list item.

### Anatomy

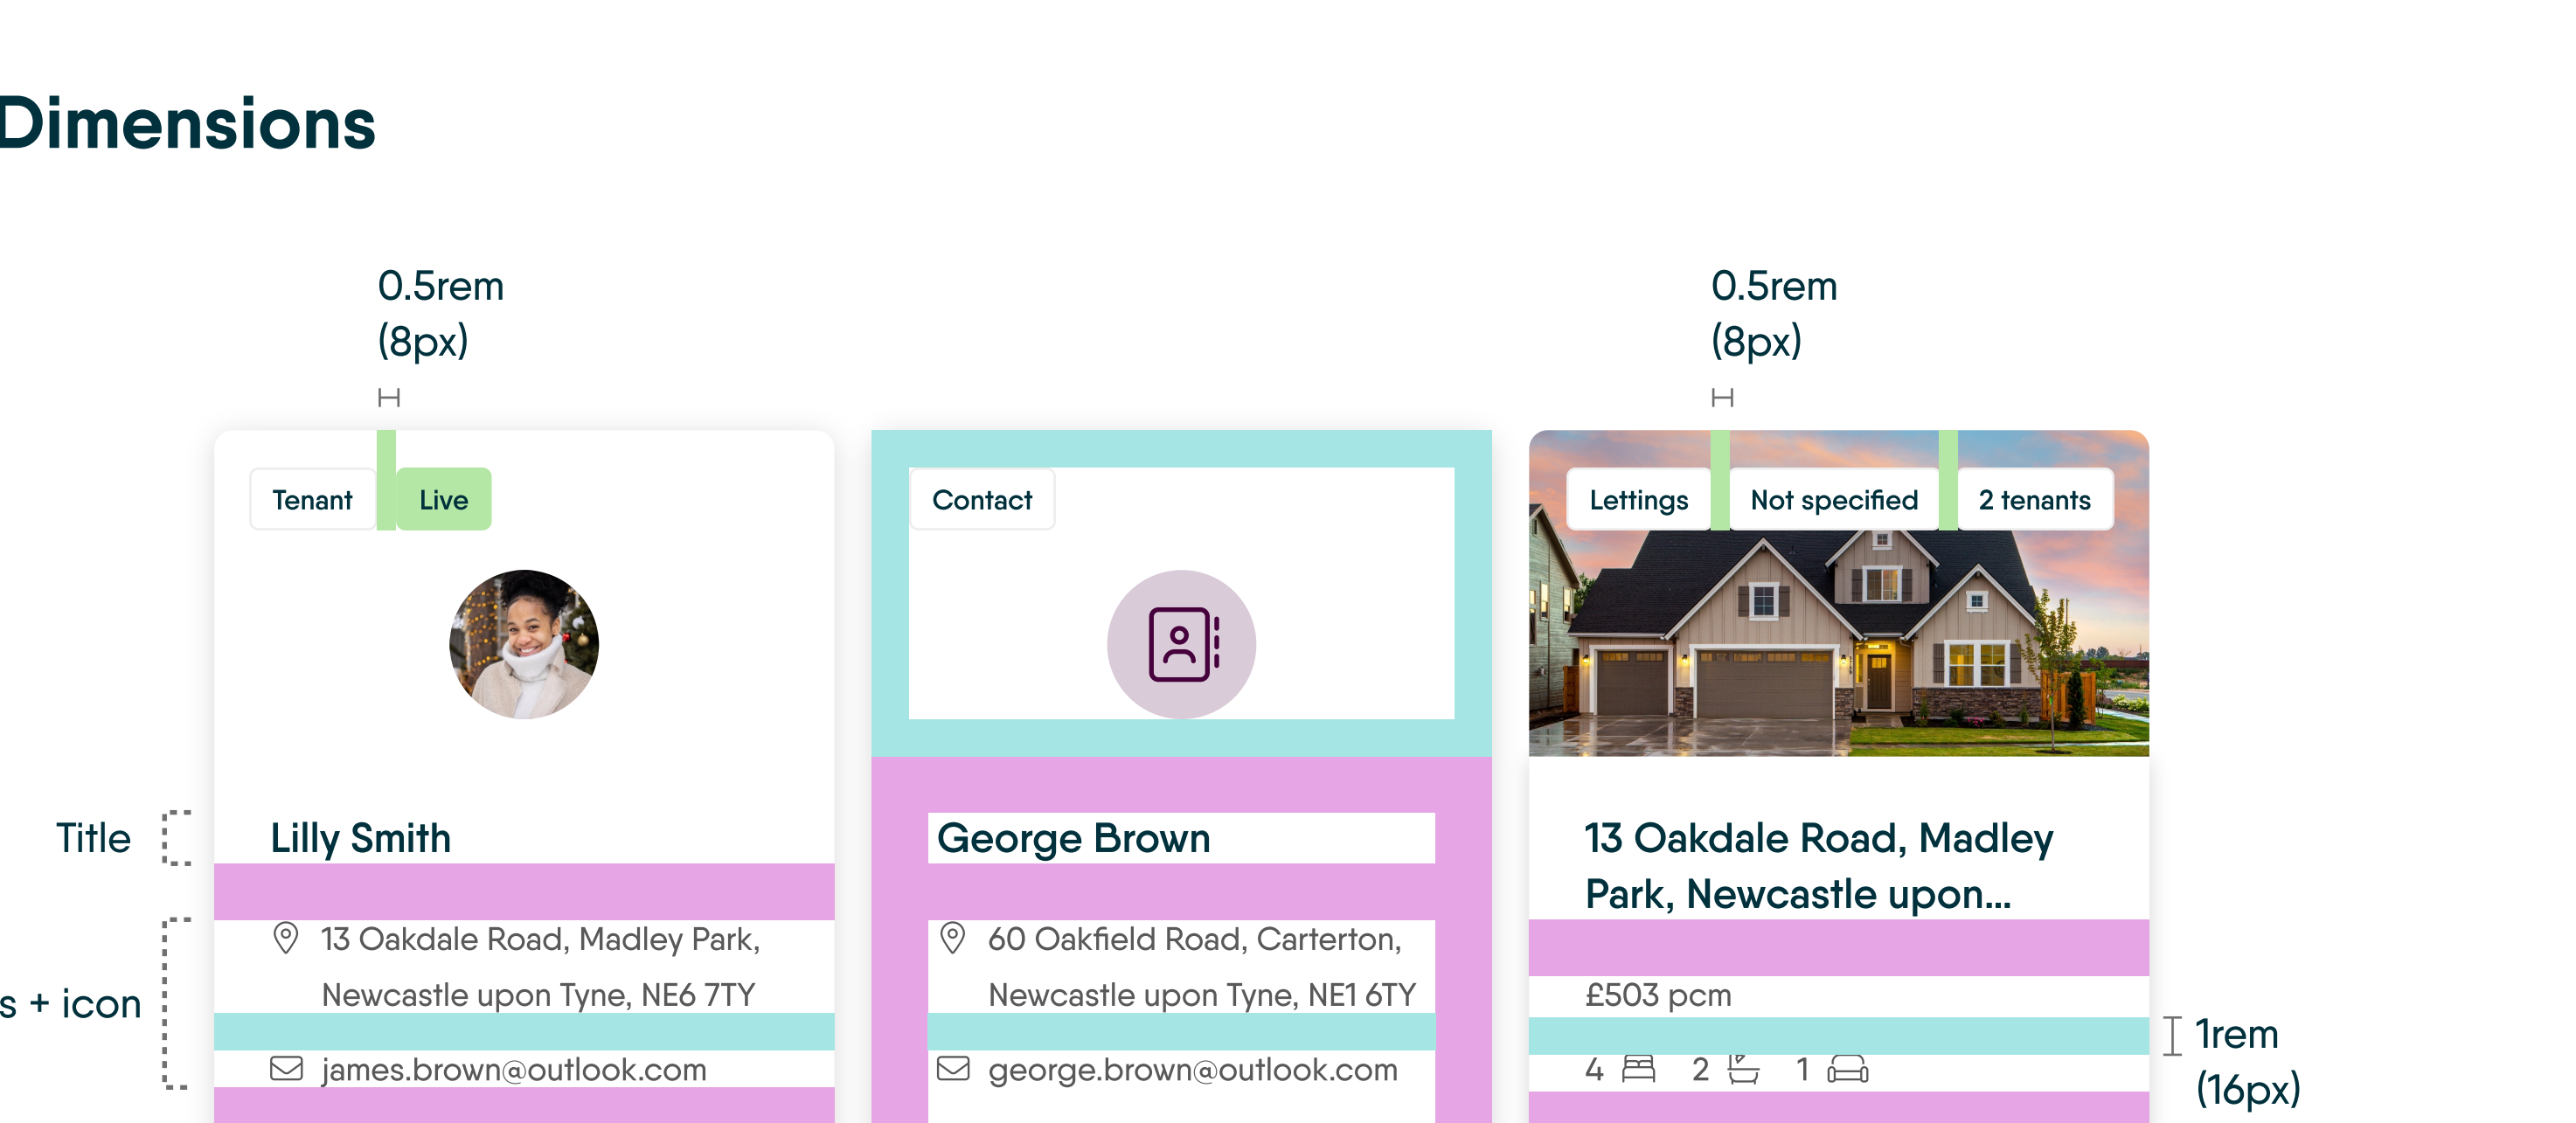

### Empty image state icon options

Property cards can display a range of card types - from vendor profiles to business details - and to distinguish them, we can use an icon and a colour in the empty image state.

### Behaviours

### Labels

The type or status of property cards can be displayed using labels in the top left corner of the card. Label order will be determined by order: primary type, optional subtypes, status.

Descriptor	Archived	Negative/Warning	Positive/Complete	In progress/Action required
Vendor	Archived	Expired	Available	Offer pending

### Dimensions

Version control: V3	Date of design update: 22.02.2024	Notable updates: Inclusion of a property card
---------------------	-----------------------------------	---
