

Form input field

File uploaders allow users to upload content of their own. A file uploader is commonly found in forms, but can also live as a standalone element. There are two variants of file uploaders—our default file uploader and a drag and drop file uploader. Max-width: 800px, In other cases, assume that the width typically follows where the form lives in (Modal, focused task, page, etc.)

File uploader

Default file uploader

This is a variation of the Header card which includes the addition body copy description.

Default file uploader with form fields

In some circumstances a document upload may require you to label which document type it is you're uploading, please use the form fields necessary to achieve this. No matter the form field element chosen, it must follow the correct guidance which is applied to that form field type used alongside the file uploader.

Drag and drop file uploader

Default drag and drop file uploader

The drag and drop uploader has a max width of 50rem (800px) and a max height of 25rem (400px). Like the default file uploader, the drag and drop file uploader can be house within a modal, focused task or page. Drag and drop file uploaders are used to directly upload files by dragging and dropping them into a drop zone area. Alternatively, you can also traditionally open files through a file selection dialog by clicking the text link description inside the drop zone.
